Vital Statistics

Vital statistics—i.e. records of births, deaths and marriages—are in some senses the most fundamental of all figures published about a country. They provide information which is of great value to the medical profession and public health authorities in their continuing fight against disease and premature death, and they assist in making accurate estimates of the population in the years between the decennial censuses.

The analysis of death certificates by cause, sex and age gives valuable information regarding trends in infant and maternal mortality, and deaths from communicable diseases and other causes such as cancer, diabetes, etc. As an example, a study of the statistics shows that from 1921 to 1947 infant mortality dropped from 102 deaths per thousand live births to 45 per thousand, while during the same period maternal mortality fell from 5 deaths per thousand live births to 1.5. During the past two decades the mortality rate of four important communicable diseases—diphtheria, scarlet fever, measles, and whooping cough—has declined by over 80 per cent.

NOTICE

To bring the descriptive date of each issue of the Canadian Statistical Review to a closer conformity with the publication date this issue, which follows by one month the November, 1948 issue, is designated January, 1949, rather than December, 1948. This change is entirely one of nomenclature and in no way affects the continuity of the publication or the number of issues that subscribers will receive.

The size and rate of growth — or decline — of a country's population is basic to the interpretation of most economic statistics. This does not mean, of course, that there is any simple correlation between the size of population and the degree of prosperity enjoyed in a country; many intricate and highly complex factors enter into the picture. It is, however, to take one illustration, important to know not only the increase or decrease in the national income but the relationship of that change to the growth or decline in the population, so that the trend in the average national income per head of population can be established.

Again, changes in the marriage rate and in the birth rate are of considerable importance in forecasting the probable level of construction activity, with its important bearing on other economic activities. An increase in the number of marriages is likely to mean that more homes will be needed, and an increase in the birth rate indicates that attendance at primary schools will increase in five or six years time and at high schools in thirteen or fourteen years, and that the demand for other facilities will tend to rise as time goes on. The effect of a decrease in the marriage or birth rate will obviously have the opposite implications. (The chart on page iv shows the trend in the Canadian birth and death rates and the rate of natural increase during the past 23 years.)

Other factors, of course, have to be taken into account when estimating the effects of these changes. For example, the incidence of marriages on the demand for houses is apt to be less during a depression because the couple may for a time live with one of their families. The pressure on schools is apt to follow fairly closely a rise in the birth rate, taking the country as a whole, but for particular localities it may be intensified or minimized by movements of population from one area to another. Nevertheless, a knowledge of population trends, of changes in the birth and death rates, and of interprovincial shifts promotes a clearer and more accurate interpretation of developments in the Canadian economy.

How the Statistics Are Collected and Compiled

As provided under the Statistics Act of 1918, which established the Dominion Bureau of Statistics, and as the result of two Dominion-Provincial Conferences on vital statistics held at Ottawa in June and December, 1918, a plan was devised whereby the Dominion Bureau of Statistics and the vital statistics offices in each province would co-operate in the production of national vital statistics. Under this national system, while registration of births, still-births, marriages and deaths was to be carried out as heretofore by the provincial authorities, the legislation of each province conformed in essential features to a Model Vital Statistics Act — one of the features of which was compulsory registration — adopted by the 1918 Conference. Each province now has its own Act; it has complete jurisdiction over the registration of vital events and operates under its particular Act according to its own particular needs and policies. However, by virtue of the 1918 Dominion-Provincial agreement, vital statistics can be compiled on a uniform basis for the Dominion as a whole.

Modern equipment and organization has been applied during the past few years to give Canada one of the most up-to-date systems of recording vital statistics. This was necessary because of the urgent demands for making information from the registrations more readily and currently available. The registration records are microfilmed at the provincial vital statistics offices and forwarded to the Bureau at regular periods for two purposes; first, the preparation of indexes containing the name of the individual, the place and date of the birth, marriage or death, and other essential facts; and second, the compilation and tabulation of national statistics of births, stillbirths, marriages and deaths (including causes of death), which are published by numerous classifications and cross-classifications, as will be discussed later.

Up to 1944 vital statistics were compiled according to the place or province in which the births, marriages or deaths occurred; since that time birth statistics have been compiled according to the place of residence of the parents of the child and deaths according to the place of residence of the deceased. This change is of great importance in social analysis. For example, to study the relative trends in rural and urban fertility one needs to know the residence of the parents rather than the fact that the mother chose to go into a city or town hospital to have her baby. Equally, in compiling comparative figures of provincial birth and death rates, place of residence and not place of occurrence is the important fact.

Figures on divorce are received through the co-operation of the provincial authorities; however statistics of divorces granted to Quebec residents are supplied by the Clerk of the Divorce Committee of the Senate of Canada. The national reporting of communicable diseases was undertaken by the Dominion Bureau of Statistics in 1933 at the request of the Department of Pensions and National Health and in co-operation with the provincial departments of health. The provincial departments forward to the Bureau weekly statements of the number of communicable diseases reported, which are then compiled and published for the Dominion as a whole.

Annual Estimates of Population

The method used in calculating the number of people in Canada in the years between the censuses is in effect a population accounting system, with the census providing a fresh starting point every tenth year. For each year the number of births and immigrants during the year (the latter recorded by the Immigration Branch of the Department of Mines and Resources) provides the gross increase, and from this the number of deaths and Canadian emigrants are deducted to give the net increase. The volume of emigration is obtained from records of the U.S. and U.K. Governments giving the number of Canadians entering those countries, plus an estimate made by the Bureau of those leaving Canada for other countries. This calculation may be carried out separately for each age group and each sex in the country.

The calculation of provincial populations is somewhat more difficult than for Canada as a whole, particularly for years in which there is a large movement of population within the country. Until 1947 there was no uniform method of estimating interprovincial movements, and ration card counts, school populations and other indicators were each resorted to at different times. Starting in 1947, however, the regular June labour force survey was enlarged so as to ask each person interviewed where he was living twelve months previously, and from this material reliable estimates of the gross and net interprovincial movements are made.[1] These, together with figures for births and deaths in each province, permit estimates of provincial populations to be calculated along the lines described above.

Reports on Vital Statistics

The *Monthly Report on Births, Marriages and Deaths* gives the total of each event registered during the month, by provinces and for Canada as a whole, while another monthly report, *Registration of Births, Deaths and Marriages* gives this information by cities and towns for all those places with a population of 10,000 or over. These two reports will shortly be combined to form one publication. Figures taken from the first of these reports, together with population estimates, will be found in table 4 of the *Canadian Statistical Review.* A quarterly *Premilinary Report on Births, Deaths and Marriages* gives a summary of births, deaths and marriages occurring in each quarter of the year, by provinces. The report also includes special tabulations of infant, neo-natal, and maternal deaths and cross-classifications of general mortality by causes of death.

Three annual reports are issued. The first to appear in the *Preliminary Annual Report, Vital Statistics of Canada, Tentative Figures.* It is published shortly after the close of the year and contains tables of births, deaths and marriages, infant and maternal deaths, and the number of communicable diseases. Certain of the information is listed for the larger cities. The *Preliminary Annual Report, Vital Statistics of Canada, Final Figures,* is, as the name implies, the final tabulation in summary form, and is a revised and enlarged version of the former report, containing an extensive section on the causes of death. The final report, entitled simply *Vital Statistics,* represents a detailed report with extensive cross-classifications and tabulations. It contains over 700 pages of comparative and analytical tables giving a wealth of information on births, marriages, deaths, and communicable diseases.

Other Reports

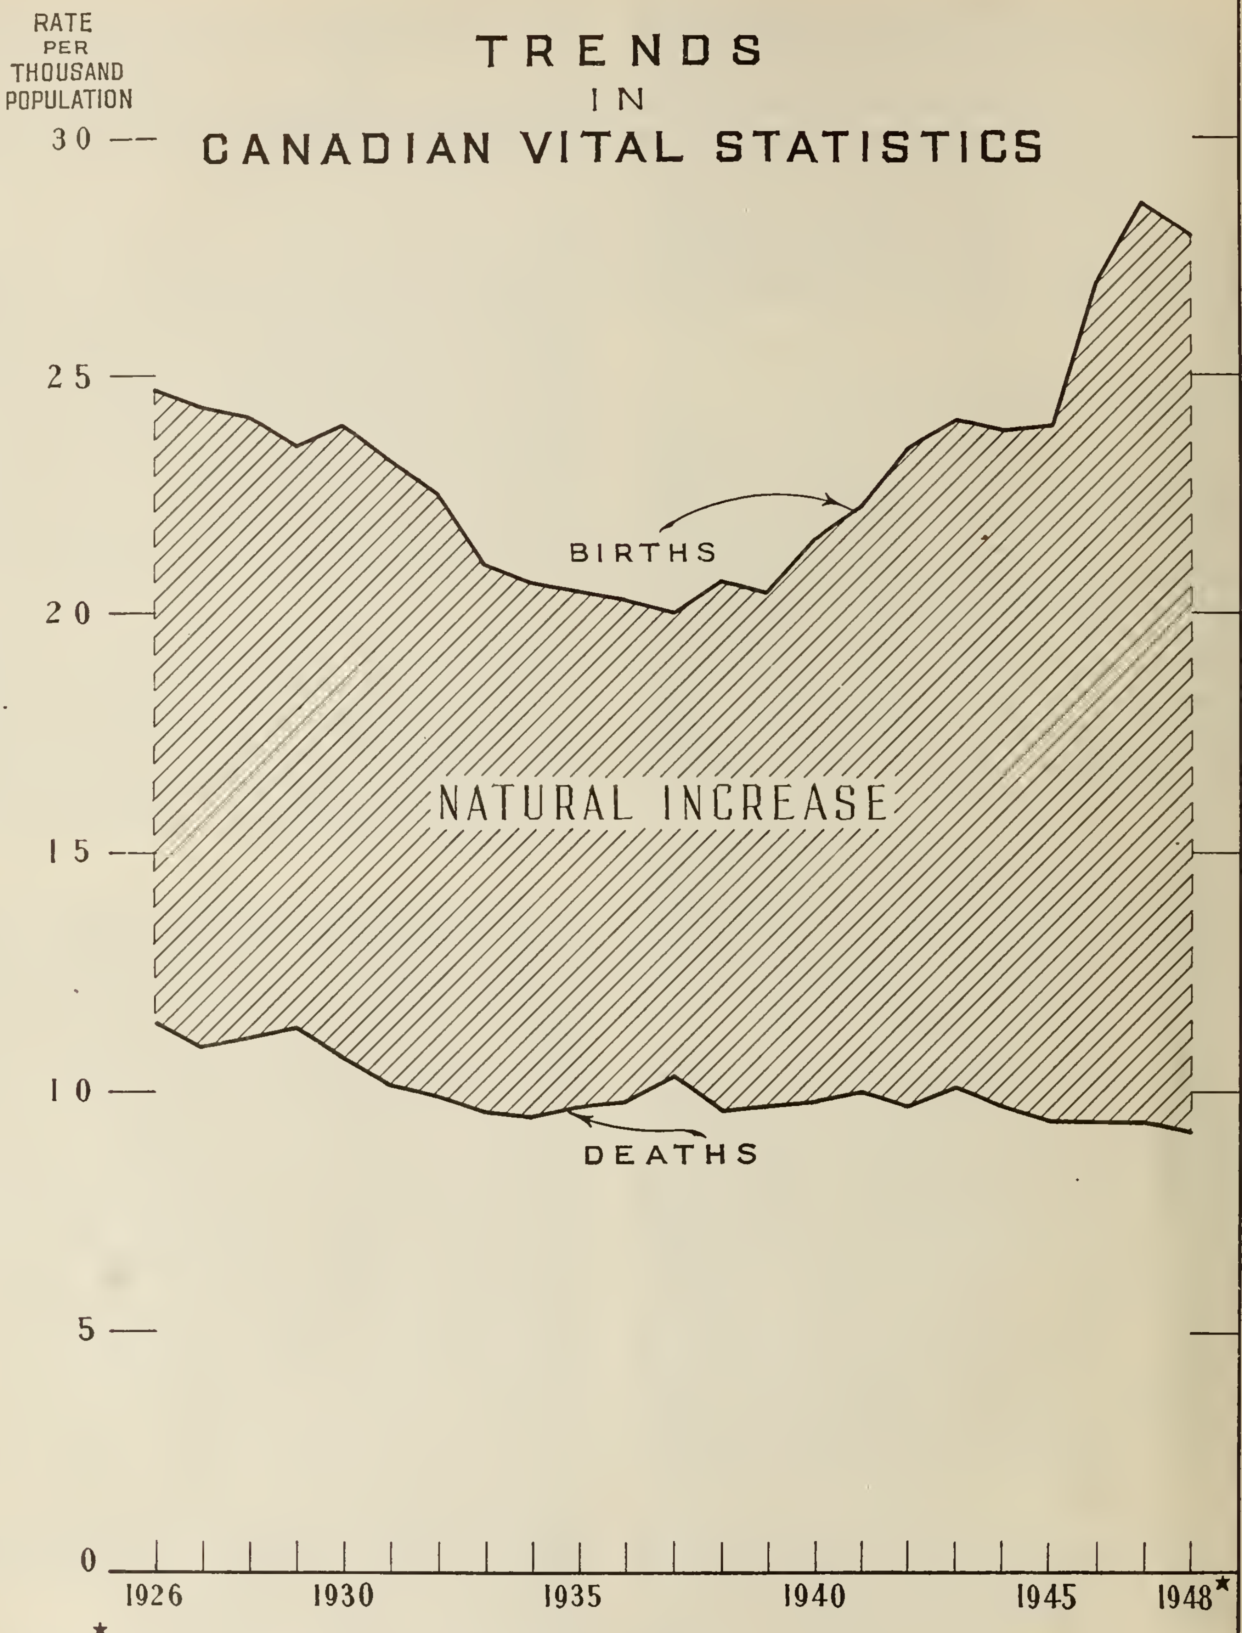
Intercensal estimates of population are published in the late summer of each year in a one-page mimeographed report *Population of Canada, by Provinces, Estimated for Intercensal Years.* An extension of this publication is a special report *Census and Estimated Populations of Canada and the Provinces by Sex and Age Groups 1931-48* which was issued to meet the requirements of provincial and municipal health authorities and will be kept up-to-date.

The report on *Dissolution of Marriages (Divorces) in Canada* gives in addition to divorce rates and cross-classifications by sex of divorcees in each province statistics on the remarriage of divorced persons, and comparisons between Canada and other countries in respect to number of dissolutions, covering the last two decades.

A number of special reports have also been issued. *Violent Deaths in Canada* gives the number and rates of suicides, homicides and accidental deaths. *Cancer Mortality in Canada* covers the period 1921-44 and gives the rates, effects of age and sex distribution, sites of disease and geographical incidence. The *Vital Statistics Handbook* and *Physician's Pocket Reference to the International List of Causes of Death* are printed booklets designed primarily for the information and guidance of professional groups. The *Health Reference Book* includes a compilation of statistical data and background material concerning Canadian health services, a review of Dominion, provincial and local health programs and related financial information. *Canadian Life Tables* have been published three times; the third was for 1945 and the fourth, for 1947, is now in the process of preparation. They are based on population and death figures and show how a conventional number of births (usually 100,000) is, age by age, reduced by deaths.

---

(1) The technique employed in making labour force surveys and estimates was described in the April, 1948 issue of the *Canadian Statistical Review.*



TRENDS IN CANADIAN VITAL STATISTICS

★ First ten months of 1948 shown as an annual rate.

Current Economic Conditions

Since the last issue of this Review some indicators of trends in industrial and trade activities have remained stable or receded slightly but most have continued to move upward. The cost-of-living index which had remained unchanged from October 1 to November 1 at 159.6 declined to 158.9 as at December 1. This was the first decline since September, 1945, apart from a drop of 0.1 on January 1, 1947. The fall was entirely in the price of foodstuffs, with all other items remaining stable or rising slightly. The food index stood at 202.0 on December 1 compared with 204.7 on November 1 and 205.4 on October 1.

The seasonally adjusted index of the physical volume of production (1935-1939=100) stood at 185.5 for November, almost unchanged from the October revised figure of 185.4. This is the highest peacetime figure achieved in the history of the country. The comparable figure for November, 1947, was 177.8. The index of manufacturing production stood at 197.3 for November compared to 197.1 for October with that for non-durable products rising from 181.4 to 183.6 while the durable goods mark declined from 223.9 to 220.9. The index of electrical power production was off rather sharply at 157.1 as compared with 165.4, the figure for October. The November, 1947, mark was 156.0.

A survey of the civilian labour force indicates that between September 4 and November 20 it dropped from an estimated 5,109,000 to 4,964,000, thus falling below an estimated five million for the first time since the survey made in February, 1948. The return of a substantial number of previously employable persons between the ages of 14 and 21 years to school or college and the seasonal movement of women from farm work to housekeeping were, it is thought, the prime contributory factors in this reduction. Although there was an increase of 75,000 in employment in non-agricultural activities during the period covered by the survey, total unemployment increased by approximately 40,000 to reach an estimated 106,000. The number of persons employed in agricultural pursuits dropped, as a result of the seasonal decline in farming activities, from an estimated 1,250,000 to about 986,000.

Canadian labour income for the month of October was estimated at $637 million. This is $27 million lower than the estimated $664 million for September but the latter included payment of $31 million in retroactive wages to the employees of the Canadian railway systems. Apart from this lump-payment in September, the October figure would be a new high for any single month. The ten-month payments of wages, salaries and supplemental labour income is estimated at $5,879 million, about 15 per cent above the $5,117 million for the same period of 1947.

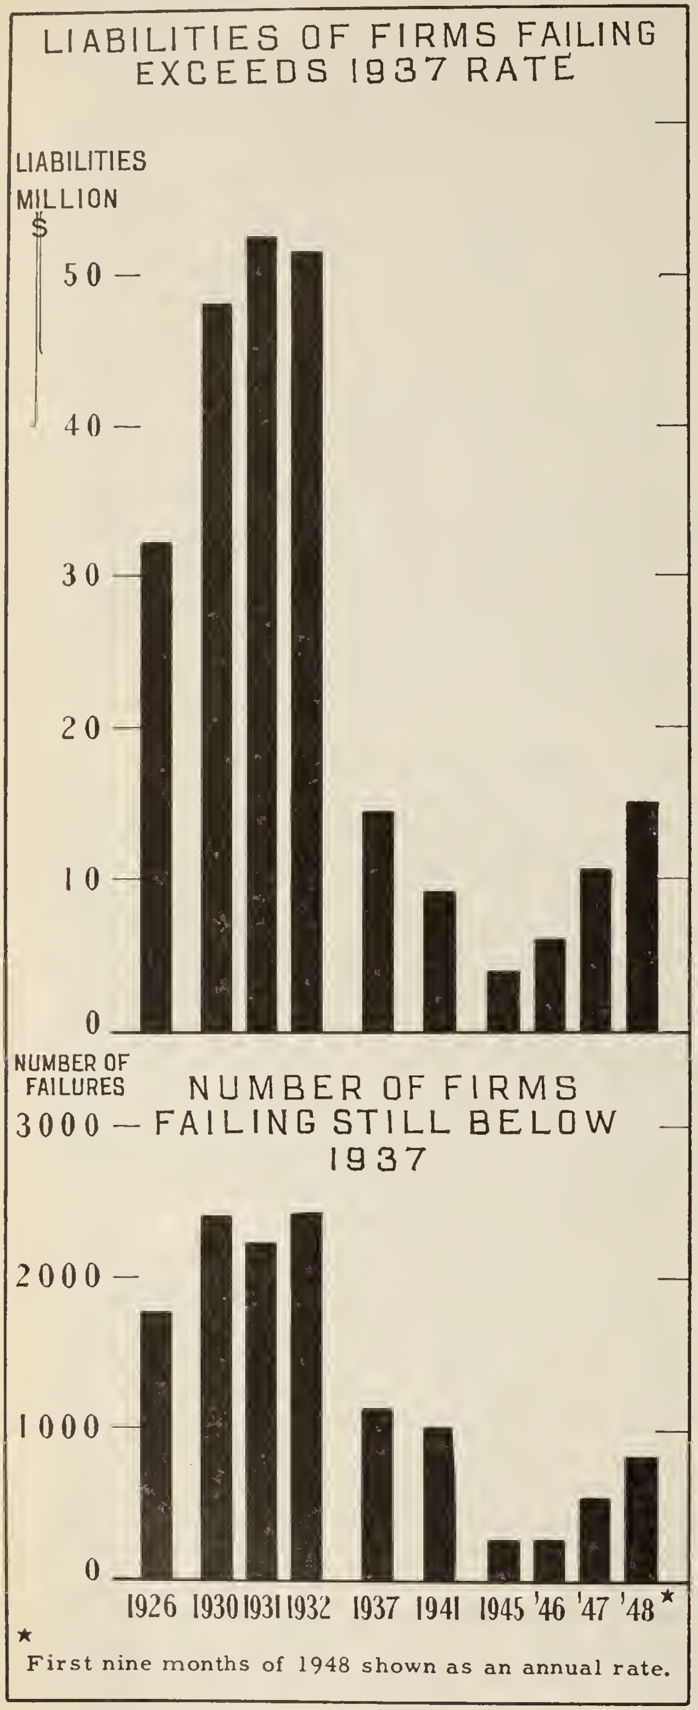
Both employment and payrolls in the eight major industries reached new high levels on November 1. The employment index (June 1, 1941=100) was at 133.3, up from 133.1 on October 1 and 129.5 for November, 1947; aggregate weekly payrolls (on the same base) stood at 217.8 compared with 215.7 for October and 189.7 for November, 1947; and average weekly earnings were $42.16 for November, up from $41.80 for October and $37.79 for November, 1947. On June 1, 1941, they were $25.25.

Over 75,000 New Dwelling Units

New dwelling units completed during 1948 will certainly exceed 75,000 and will probably reach the 76,500 mark, on the basis of the most recent Dominion Bureau of Statistics housing survey. The construction industry started its 1948 operations with 42,215 units under construction and by November 30 had completed 68,103 units with a further 61,093 still under construction. A "dwelling unit" for the purposes of the survey is defined as the living quarters occupied by one household or family. Thus the number of dwelling units in any one structure is the number of separate households it is designed to accommodate.

During November 21 per cent of all completions were built, from start to finish, within 90 days and a further 50 per cent between 90 and 180 days. Thus many of the 61,093 units under construction at November 30 should have been brought to completion during the month of December. A survey of the completions for this month has not, however, as yet been completed. Further strengthening the estimate of over 75,000 completions for 1948, is the known fact that, for obvious reasons, stress, during the winter months, is placed on completing dwellings under construction rather than on initiating new work. Dwelling units completed during the three previous

COMMERCIAL FAILURES



★ First nine months of 1948 shown as an annual rate.

years totalled 42,617 in 1945; 60,575 in 1946 and 72,346 in 1947.

The estimate of new dwelling units completed does not take into account the conversion, to house a greater number of households, of already existing buildings. Such conversions during 1947 have been estimated as housing for an additional 7,013 families, with the two earlier years showing considerably smaller totals. A preliminary estimate places the number of units provided through conversion in 1948 at slightly over 5,000.

Travellers Influence Dollar Exchange

A net credit of approximately $158 million in visiting Americans' expenditure in Canada over Canadian travel spending in the United States during 1948 was an appreciable factor in the improvement of our dollar position. American visitors to Canada, some of them entering this country for other purposes but the majority being tourists, spent during the past year about $270 million during their stay while Canadians on similar trips to the United States spent approximately $112 million.

American expenditures in Canada set a new high record during the past year. Only in the years 1946 and 1947 have U.S. spendings on travel in Canada totalled more than $200 million, when they were $216 and $241 million respectively. Canadian expenditures in the United States, however, were sharply down in 1948 from the totals of $130 million in 1946 and $152 million in 1947, due mainly to the restrictions on the amount of money available to Canadians visiting the United States and to the suspension—now removed—of the customs regulation whereby $100 worth of goods could be brought into this country free of duty by a traveller who remained out of Canada for more than 48 hours.

As a result of the simultaneous increase in American spendings in Canada and decrease in Canadian expenditure in the United States the spread between these, or the net credit in Canada's favour, exceeded any previously recorded. Only in the years 1929 and 1930 has this credit reached $100 million and the $158 million recorded last year is slightly more than double the $78 million average for the last 23 years. The credits accruing to Canada during the years 1946 and 1947 amounted to $86 million and $90 million respectively.

As a source of U.S. dollars the international travel industry has, in recent years, ranked second only to the export of newsprint, and the industry of catering to and supplying American visitors to Canada has become one of major importance. During the period 1926-1948 inclusive, it has been estimated that American visitors have spent in Canada approximately $3.3 billion while Canadians have spent in the U.S. about $1.5 billion.

Secondary Advantages Gained

While the primary importance of American travelling in Canada at the present time is the gain of U.S. dollars it involves there are, nevertheless, secondary effects, economic, political and cultural of great value to this country. The influx of American visitors to Canada has given the United States a better understanding of our country, its contribution to the war effort, its relation to the Commonwealth of Nations, and its immediate problems.

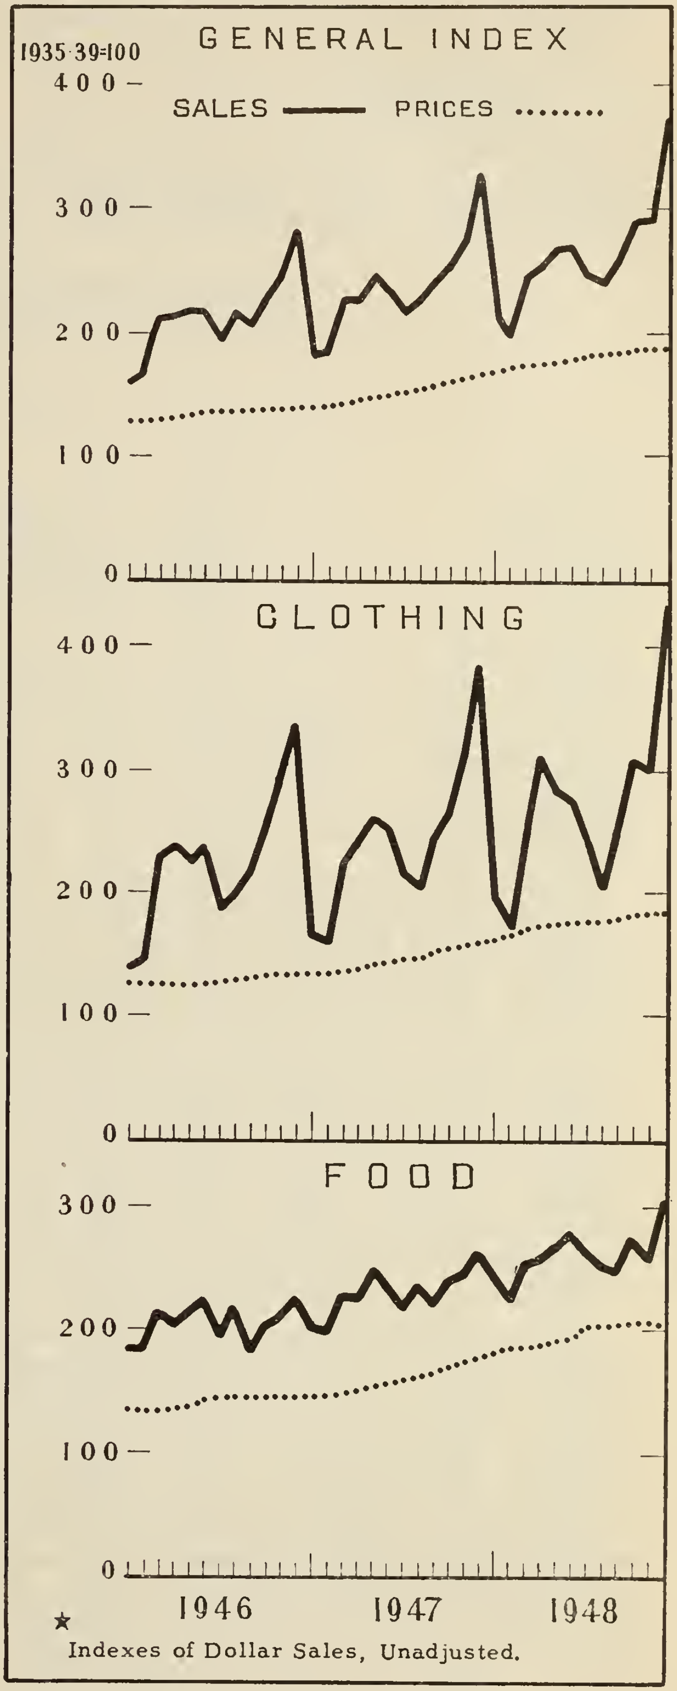
Further, expenditures by those of the visitors who may properly be classed as "tourists" are made primarily in those parts of the country which, while scenically attractive have few other sources of revenue. In these areas hotels and cabins have been built with a consequent employment of labour; good roads have been built to the advantage of all residents; stores and shops carry, to the advantage of all, a large variety of goods to offer the visitors; and, most important, much remunerative work is found in supplying goods and services to the tourists. It can indeed be said that through the tourist trade the whole standard of living in large areas of Canada has been raised.

Mineral Production at All Time High

Canada's mines, wells and quarries produced during 1948 minerals which had a dollar value greatly exceeding that attained in any previous year. Estimates, supplied by the producers and combined by the Bureau of Statistics, indicate that the value of the 1948 mineral output will exceed $806 million, an increase of 25 per cent over the previous record of approximately $645 million attained in 1947. Higher values per unit produced and increased volume of production combined to bring about the new figure.

The accompanying table shows, for those ten minerals which had in 1948 production valued in excess of $25 million, and which make up 84.5 per cent of the entire 1948 production by value, the 1947 and 1948 volumes of production and the rates of increase in the latter as compared with the former year together with

TRENDS IN RETAIL SALES* AND PRICES



* Indexes of Dollar Sales, Unadjusted.

the dollar values and rates of increase for the same years. It will be observed that in all cases (except, of course, gold where the value was unchanged at $35 per fine ounce) the 1948 increase over 1947 in dollar value has been greater than the increase in volume of output. This, obviously, has been caused by an increase in the price per unit being superimposed upon an increase in the number of units produced.

MINERAL PRODUCTION, 1947 AND 1948

	VOLUME (thousand units)			VALUE (thousand dollars)		
	1947	1948	per cent increase	1947	1948	per cent increase
METALS						
Gold (fine oz)................................	3,070	3,495	13.9	$107,458	$122,339	13.9
Copper (lbs)................................	451,723	479,760	6.2	91,542	107,112	17.0
Nickel (lbs)................................	237,251	257,742	8.6	70,651	85,615	21.2
Zinc (lbs)................................	415,726	464,189	11.6	46,686	64,662	38.5
Lead (lbs)................................	323,337	336,636	4.1	44,200	60,729	37.4
MINERAL FUELS						
Coal (tons)................................	15,869	18,431	16.1	77,475	107,299	38.5
Petroleum (bbls)...........................	7,692	12,098	57.3	19,576	36,859	88.5
OTHER NON-METALLIC MINERALS						
Asbestos (tons)............................	662	708	7.0	33,006	41,318	25.2
Cement (bbls)...............................	11,936	14,112	18.2	21,969	27,897	27.0
Sand & Gravel (tons)......................	56,790	64,252	13.1	23,114	26,786	15.9

Although the dollar value of all minerals listed above was greater in 1948 than in any other year (except in the case of gold where the 1941 output was valued at $205,789,392) the output by volume was not, in most cases, the greatest ever recorded. Below are listed the maximum volume output and the year it was reached for those items listed above which did not have record outputs in 1948: gold 5.3 million oz. (1941), copper 655.6 million lbs. (1940), nickel 288.0 million lbs. (1943), zinc 610.8 million lbs. (1943), lead 512.1 million lbs. (1942), and coal 18.9 million tons (1942).

The value of all metals produced (including those not shown in the above table) increased 22.4 per cent and that of mineral fuels 43.7 per cent. These increases were of considerable assistance in Canada's effort to rectify her U.S. dollar exchange position. Much of Canada's metal production, particularly of gold, copper, nickel, lead, and zinc, is exported, with a very considerable portion of the exports going to the United States to be paid for in American dollars or going to those countries which under special arrangements pay for some essential imports in American currency. The fuels, of course, are not exported in any appreciable quantity but any increase in the volume of production brings about a lessened need for imports from the United States and the consequent expenditure of American currency.

The tremendous increase in petroleum production, 57.3 per cent by volume above 1947 and 16.8 per cent above the previous record year of 1942 reflects the recent development of the oilfields in Northern Alberta. Many competent observers believe that these fields will in the near future, perhaps in the current year, place a major portion of Western Canada in a position where it will be free of the necessity of importing gasoline from the United States. To a lesser extent the increased coal production will augment Canada's fuel supply, although because of haulage costs it is in some parts of the country economical to import American coal even though Canadian coal is available.

Ontario, with production valued at $286.7 million, maintained her primacy among the mineral producing provinces, having 35.6 per cent of the total production. This was a lower proportion of the total than in either 1946 or 1947, when it was 38.1 per cent and 38.7 per cent respectively. British Columbia with 18.3 per cent of the total and Quebec with 18.2 per cent ranked second and third among the provinces while Alberta was fourth with 11.5 per cent. It is noteworthy that Alberta's production of minerals was almost entirely limited to the three fuels coal, natural gas and petroleum.

Selected Economic Indicators

[1] Not applicable to Column 5 "Average hourly earnings".

[2] Annual data as of June 1, monthly data as of November 9, 1946, March 1, May 31, August 16, November 8, 1947 and February 21, June 5 and September 4, 1948.

[3] Includes retroactive payments to railway employees.

[4] Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12.

*Under revision.

---

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

* Averages of fire weeks.

(1) Monthly averages or calendar months.

(2) Annual data as of middle of July. Monthly data for dates varying from 8th to 17th of month. February 1947 as of 22nd.

(3) Average quarterly statistics are given in the monthly section, except the recent data for exports which are monthly estimates.

(4) Interim index of retail prices, June 17, 1947 = 100.

(5) Series revised, June 30, 1947 = 100.

(1) As of June 1. (2) Exclusive of stillbirths.

(3) Not applicable to figures on population.

(4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

[1] As of June 1. [2] Exclusive of stillbirths.

[3] Not applicable to figures on population.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

---

(1) Excluding producers' interchange.

(2) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(3) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

Note: Coverage was increased in 1947, the provincial distribution for 204 municipalities being shown above. The collection was extended to 507 municipalities in 1948, minor revision being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1) Hollow blocks including fireproofing and load-bearing tile. (2) Planks and boards.

(3) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

---

(1) Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

(3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

(4) Includes customs exports of Canadian oatmeal and rolled oats.

---

(1) Available for January, April and August only.

(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

(5) Subject to revision.

(1) Australia, New Zealand, South Africa, India and Pakistan.

(2) Includes Belgium, China, Czechoslovakia, France, Netherlands, Netherlands Indies and Norway.

Source: Monthly Report; Imports for Consumption, Trade of Canada, D.B.S.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

*See footnote of page 102.

(1) The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of $500,000 or over.

(2) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

(3) For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scales.

Employment, Payrolls and Earnings

The Dominion Bureau of Statistics collects, compiles and publishes monthly statistics on employment, salaries and wages, average weekly and hourly earnings, and average hours worked, and the proportion of men and women, in the leading non-agricultural industries of Canada. The figures are from concerns employing fifteen or more persons; the industries covered are manufacturing, logging, mining, communications, transportation, construction and maintenance, trade, finance, and services. The coverage extends to all branches of these industries except in the case of services, which includes chiefly hotels, restaurants, laundries and dry cleaning plants. The statistics appear in summary form in tables 9 to 14 (pages 21 to 39) of the *Canadian Statistical Review*, and are published in more detail in three monthly and one annual reports, listed at the end of this article.

All of these series are of considerable value as guides both in assessing general economic trends and in helping management, labour and other economic groups to solve specific problems. Some of their uses will be discussed later in this article following a brief description of the statistics themselves.

Employment and Payrolls

Employment statistics have been collected since 1920. Until 1941 the employer was asked to state the number of persons at work on the last work day of each month, but when statistics of payrolls were introduced in the spring of 1941, it became necessary to ask for nformation showing the number of employees on the payrolls in the last pay period of the month, in order to relate the employment igures to the salaries and wages. Changing the recording date for the employment statistics from the last working day to the last pay period of the month caused some change in coverage of persons employed in individual establishments, since the number drawing pay in a given pay period will usually exceed the number working on a given day. Steps were taken, however, to make adjustments for these differences and to put the employment figures subsequent to the spring of 1941 on a basis as comparable as possible with the previous figures.

A comparison of the industrial coverage of the employees represented in the index number with total figures for wage-earners and salaried employees available from the Decennial Census and the Annual Census of Industry indicates that the monthly survey's coverage of total employment ranges from about 51 p.c. in hotels and restaurants and laundries and dry cleaning plants, and 55 p.c. in retail trade, to 85 p.c. in mining and 88 p.c. in manufacturing. The Bureau makes every effort to see that it obtains reports from all firms of fifteen employees and over in the industries covered. Numerous sources of information regarding industrial developments are carefully watched to make sure that new firms are incorporated into the calculations as soon as operations begin.

The statistics of employment cover all salaried employees and wage-earners of the co-operating firms, including full time and part time workers. Separate figures of employment are compiled monthly for men and women. The tabulated payrolls include gross salaries and wages before deductions are made by the management for taxes, unemployment insurance contributions, etc. They also include cost-of-living allowances, commissions, incentive or production bonuses, and other bonuses currently paid.

Average Hours Worked and Average Hourly Earnings

From the end of 1944, statistics of man-hours and average earnings of wage-earners have been obtained in connection with the monthly surveys of employment and payrolls. These data cover a rather smaller number of companies and workers than those of employment and payrolls and average weekly salaries and wages, since they relate mainly to wage-earners employed at hourly rates, i.e., largely to production workers. In many cases, statistics of man-hours are not available for certain classes of wage-earners, whose earnings are not directly dependent upon the number of hours worked — examples of such exclusions are route drivers, piece-workers in some but not all establishments, truck men, etc. Again, some employers do not keep a record of man-hours for any classes of employees. In manufacturing, the statistics of man-hours relate to approximately 81 per cent of all wage-earners reported to the Annual Census of Manufacturers.

The statistics of hours worked include overtime hours worked as well as the hours of part-time and casual workers; they also include hours credited to persons absent on leave with pay. The wages reported represent gross earnings before deductions for taxes, unemployment insurance, etc., including incentive and production bonuses and overtime payments. They do not include the value of board and lodging which in some cases is part of the remuneration of workers.

Usefulness of These Series

The index of employment is a valuable monthly indicator of employment trends in a large and most significant sector of the economy. It should not, of course, be confused with the employment figures estimated on a quarterly basis by the Labour Force Survey, for it covers only the industries already mentioned and therefore omits certain economic groups such as agriculture, government services, education and the self-employed. The index of payrolls is another important economic barometer, reflecting, in addition to changes in the volume and the industrial and sex distribution of employment, changes in rates of pay, hours of work and the amount of overtime at premium rates.

In using the index numbers of employment and payrolls to show trends in particular industries, it should be borne in mind that the figures relate to establishments employing 15 persons or more; in most cases they represent the greater part of the industry, but in others an important segment may be omitted. This, of course, is of no significance when the trend of employment and payrolls is the same in small businesses as in the larger enterprises. Although it is conceivable that economic circumstances might arise where the movements in the smaller firms would differ markedly from those in the medium and larger establishments, certain studies made during the war years (a period of severe test) indicate that in fact the trends of employment in the two groups are generally similar.

Since figures of average weekly salaries and wages reflect fluctuations in the purchasing power of large proportions of the wage-earning population, they are useful for a variety of practical purposes. Sales and advertising organizations frequently make use of them when studying markets for particular products; the figures showing the numbers and proportions of male and female employees reported in various industries or localities, are also commonly used for that purpose. They are used by credit organizations as a factor in assessing the margin of safety in instalment buying in particular areas. Businessmen planning to open new establishments will examine the figures of sex distribution for various industries and areas to get an idea of the availability of workers suitable for their needs, and the relative costs. The scale of earnings in particular centres as reflected in the current statistics will be considered, along as with other factors, by retailers in deciding the size of outlets which they intend to establish.

Average Hourly and Weekly Earnings

Like the statistics of average salaries and wages, the figures of average hourly earnings and weekly wages are used for a variety of purposes. They immediately reflect changes in labour costs, which are, of course, a significant economic factor, as well as of particular concern to individual industries. In the latter connection, a number of establishments, largely in the heavy manufacturing industries, make a practice of placing an "escalator" clause in their long-term contracts, by which the payment for the product will vary according to the costs of labour and materials. The Bureau of Statistics' figures of average hourly earnings in the industry in question are used, together with the wholesale price index numbers, to measure these changes.

Even more frequently than the statistics of average weekly earnings, the figures of average hourly earnings are used by businessmen gathering background information on which to decide the location of new establishments. They form the basis of numerous international comparisons, and are widely used in cost-accounting. They are very commonly used in negotiating wage agreements, as indicating variations from the average in the establishments involved, and also differences in earnings in the same industry in different parts of the country. In this connection, it is important to distinguish between the statistics of average earnings and those of wage rates and wage rate index numbers, as published annually by the Department of Labour.

In comparing average earnings in different industries, or even in the same industry over a lengthy period of time, consideration should be given to several important factors, such as sex, age and occupational differentials. For example, if one industry has a large proportion of female, or of unskilled labour, and another has a large proportion of male, or of skilled labour, the average earnings in the first industry will be substantially lower than those in the second, even if the rates of pay for workers of the same skill and the same sex and age group were identical in both industries. Again, in periods of expanding employment, the dilution of labour will frequently have a marked effect upon the figures of average earnings, as the proportions of unskilled or semi-skilled workers increase, although the wage rates remain constant. Furthermore, hourly earnings include any overtime pay, the amount of which will vary from time to time and industry to industry.

Reports Issued

The first report to appear is a short release entitled *Advance Statement on Employment and Weekly Earnings*, which gives the employment index for the latest month by provinces and for Canada as a whole and the latest index of payrolls and figures of weekly earnings. This is followed by a monthly report *The Employment Situation at the Beginning of (December, 1948) Together with Payrolls for the Last Week in (November, 1948)*. This report gives the indexes of employment and payrolls and average weekly salaries and wages broken down by industry in quite considerable detail and also classified by major industries for the provinces and for the leading industries in 22 of the larger cities. In addition, this report includes tables on the sex distribution in various areas and industries.

A few days later, another report *Statistics of Average Hours Worked and Average Hourly Earnings as Reported at the Beginning of (December, 1948)* is published. This contains tables showing in considerable detail the average hours worked, average hourly earnings, and average weekly wages by industries, and also textual discussion of the statistics. The information is published by provinces and by certain leading cities.

The Annual Review of Employment and Payrolls in Canada contains a considerable volume of tables, charts, and text recapitulating and analysing the material published in the monthly reports, and giving historical background. In addition, a *Chart Book of Employment and Payrolls in Canadian Industries* is published periodically. A special annual report is now being prepared giving detailed information on Hours of Work and Hourly and Weekly Earnings of Male and Female Wage-Earners and Salaried Employees Reported by Leading Manufacturers, the data resulting from an analysis of the time and payroll records for one week in the autumn of each year.

Current Economic Conditions

Current indicators of economic conditions do not show any marked changes in either direction. The seasonally adjusted index of industrial production has remained remarkably stable, standing at 185.4 for October, 185.2 for November, and 185.3 for December. Industrial employment, as reported by over 19,000 leading industrial establishments, reached an all time high on December 1 with the index (1926 = 100) standing at 204.1. This figure, however, was very slightly above the November level of 203.6 and only about two per cent above the December, 1947, figure of 199.6.

The cost-of-living index advanced slightly between December 1, 1948 and January 3, 1949, from 158.9 to 159.6. The January 2, 1948, figure was 148.3. The general index of wholesale prices for January, 1949, stood at 159.3 compared to the 159.5 and 159.7 recorded for December and November of 1948.

The index of farm prices of agricultural products for December was estimated at 251.6 as compared with 250.1 for November (base 1935-39 = 100). This rise in the index reverses the autumn's trend under which it had fallen for three consecutive months following the establishment of a new high mark of 256.0 in August last. The 1948 monthly average of this index was 244.2, over 40 points above the 1947 monthly average.

Railway revenue freight loadings during the calendar year just ended totalled 111 million tons, a new high record and 1.9 per cent above the loadings for the previous year. During the month of January, 1949, this upward trend was reversed and loadings stood at 8.1 million tons as compared with 8.3 million tons during the same month of the previous year.

In connection with the comment made in this article last month on the tourist trade it is interesting to note that the number of foreign vehicles entering Canada on permit to remain in the country more than 48 hours totalled 32,590 during January, 1949. This figure is 15.4 per cent above the January, 1948, total of 28,243 which was in turn 16.2 per cent above the 24,306 admitted in January, 1947.

More new dwelling units were completed in 1948 than in any other year in Canadian history. This was forecast in the November issue of the *Canadian Statistical Review* and more complete returns than were then available confirm the estimate. 81,243 dwelling units are reported as being completed during the year. Of these 76,097 are in new structures and 5,146 in converted ones. From the type of dwelling units being constructed it is estimated that 75 per cent of them will be owner-occupied. 40 per cent of the rental units completed were built under the management of Central Housing and Mortgage Corporation. The construction industry started the calendar year with 56,456 units under construction as compared with 42,215 underway at the start of the year 1948.

Gross National Product and Expenditure

Examination of the recently published preliminary estimate of the National Accounts—Income and Expenditure—for 1948 shows that the gross national product was valued at $15.4 billion as compared with $13.4 billion in 1947 and $11.9 billion in 1946. Since the estimate is expressed in dollar values it is clear that any rise in prices will be reflected in an increase in gross national product. Thus since prices, as exemplified by the cost-of-living index, increased 1947 to 1948 by about 14 per cent and 1946 to 1947 by 10 per cent and the value of the gross national product advanced during the same periods by about 15 per cent and 13 per cent it is clear that, while there has been some real gain in production, the increases in the value of the GNP are largely the result of higher prices.

The net national income amounted to $12.8 billion in 1948, $11.0 billion in 1947 and $9.8 billion in 1946. The components of the national income tend to fluctuate in importance with the economic health of the country. Thus the percentage of the national income earned by investment advances in periods of high income and declines in years of low income. Obversely, wages and salaries will account for a greater proportion of the national income when other factors such as investment income and farm returns are low. These facts are illustrated by a review of the fluctuations in the ratio that wages and salaries (including military pay and allowances) has borne to the whole national income. Averaging 56 per cent in 1926-28 it rose to 75 per cent in 1933 and since that date has slowly declined until in 1948 it was 56.4 per cent. Investment income, on the other hand, stood at 17 per cent in 1929, dropped sharply to less than 8 per cent in 1932 and has since moved slowly upward to 21.0 per cent for 1947 and 20.2 per cent for 1948.

The steady increase in the industrialization of the country would tend, other things being equal, to reduce the portion of the national income earned by farm operators from farm production. However, during the last few years a combination of rising volume of production and price increases has offset this trend and has resulted in both relative and absolute increases. The net income of farm operators from farm production, including wheat participation payments, was $1.7 billion or 13.6 per cent of the national income in 1948, $1.2 billion or 11.3 per cent in 1947 and $1.1 billion or 11.6 per cent in 1946. The rate of increase in farm income 1948 over 1947 was 41 per cent.

Personal expenditure on goods and services is estimated at $10 billion or 65.2 per cent of the gross national expenditure. While these expenditures increased from $8.9 billion in 1947 and $7.9 billion in 1946 it is worthy of note that the proportion such expenditures bear to the total has declined from 66.5 per cent in 1947 and 66.9 per cent in 1946. Consumer spending in 1948 was $1.1 billion or 12 per cent above that of 1947 but since prices as measured by the cost-of-living index increased during the same period by approximately 14 per cent a decline in real consumption is indicated.

Government expenditures, after declining sharply in 1947 as compared to 1946, rose in dollar value in 1948. The figures for the three years were $1.8 billion in 1946, $1.5 billion in 1947 and $1.7 billion in 1948. Here again the ratio of increase, about 13 per cent, approximately parallels the increasing prices. The ratio of government spendings to the gross national expenditure remained in 1948 unchanged from the approximately 11 per cent figure established in 1947.

Gross home investment in plant, equipment and housing totalled $2.5 billion in 1948 as compared with $2.0 billion in 1947 and $1.3 billion in 1946. While this component gained relative to the total expenditure the rate of increase, 1948, over 1947, was less than half of what it was in 1947 over 1946. Net additions to inventories at $0.6 billion in 1948 were considerably below those of $0.8 billion for the year earlier.

Exports of goods and services rose to $4.0 billion from $3.6 billion for the previous year while imports remained practically unchanged. There was thus for 1948 a substantial net foreign investment amounting to approximately $0.4 billion.

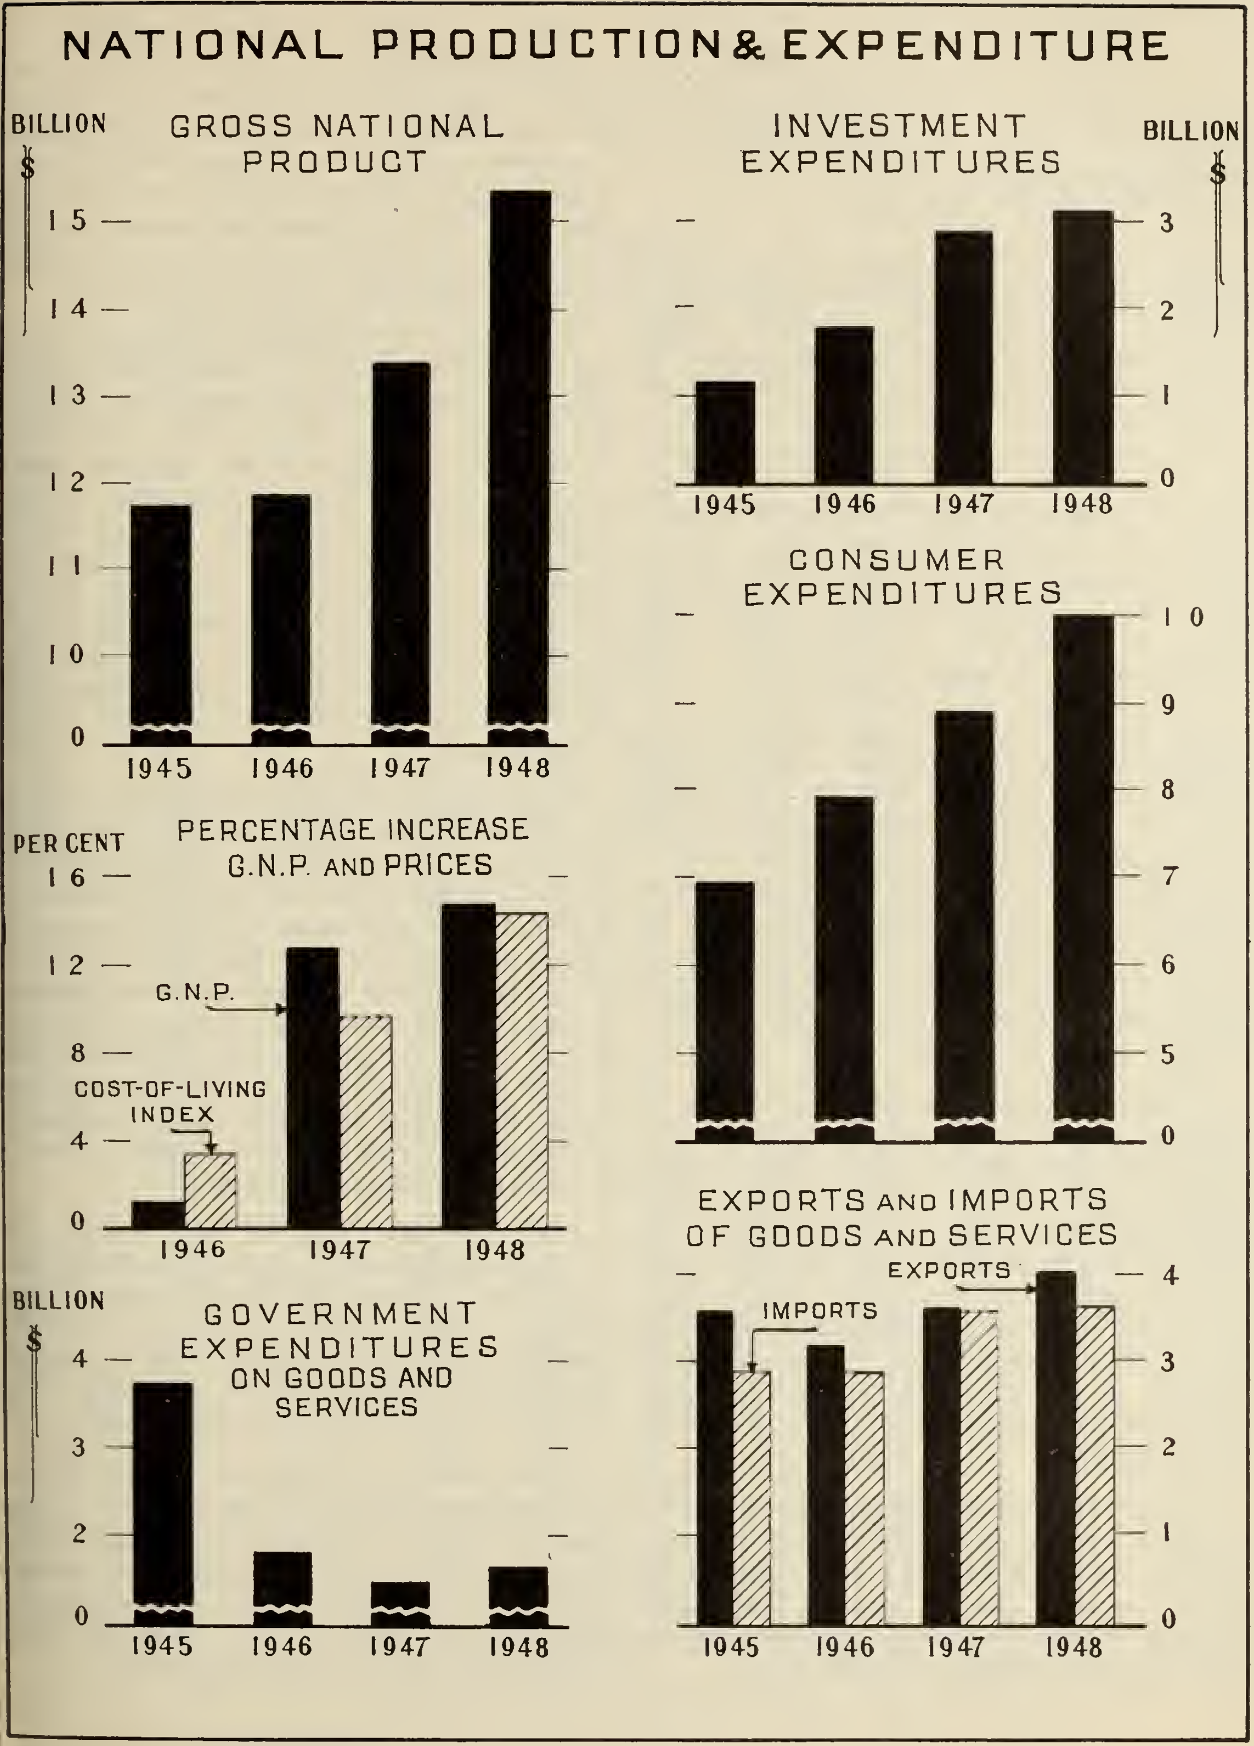
American Developments

The year just ended was by far the busiest in U.S. economic history. Employment, income, and industrial production all reached new high levels. There are, however, signs that in many instances the rate of advance started to decline in the last few months and that in others a definite shrinking is observable.

Secretary of Agriculture Brannan recently reported that farm income for the year 1948 was estimated at $17.8 billion, two per cent below the 1947 figure. This is the first reduction in farm income reported in ten years. Mr. Brannan, in testimony before a joint congressional committee, expressed the opinion that the peak of farm prosperity is probably past.

A reduction, in January of this year, of the "composite price" for steel scrap from $43.00 to $37.50 per ton was, in light of the world's hunger for steel, of peculiar significance. Under normal circumstances the price of steel usually fluctuates at the ratio of one to four with the price of scrap and thus an early reduction in the price of new deliveries of approximately $1.50 per ton might be expected. Competent observers in the industry, however, do not expect that any such reduction can take place owing in part to increases in other steel-making costs and to the operators fear of higher corporate taxes and further wage increase demands when present labour contracts expire in April next.

Employed persons as of the first week in January numbered 57.5 million, down by approximately two millions from the figure of 59.5 million for the first week of December and four millions below the mid-summer all time high employment record. Although layoffs, December to January, were higher than in any month since the end of the war they were, at least in part, seasonal and the January, 1949, total of employed persons was approximately



NATIONAL PRODUCTION & EXPENDITURE

GROSS NATIONAL PRODUCT

CONSUMER EXPENDITURES

PERCENTAGE INCREASE G.N.P. AND PRICES

GOVERNMENT EXPENDITURES ON GOODS AND SERVICES

EXPORTS AND IMPORTS OF GOODS AND SERVICES

300,000 above that of January, 1948. The total number of persons considered unemployed rose, December to January, by 0.7 million to reach 2.7 million, the highest figure attained in recent years and 0.6 million above the January, 1948, mark. Increases in both employment and unemployment indicate, of course, an enlarged labour force.

United States prices during the last three months of 1948 and January, 1949, followed a downward trend with the consumers price index (in general, similar to the Canadian cost-of-living index) showing three consecutive monthly declines and standing for December at 171.4. This index, like its Canadian counterpart, is based upon 1935-39 = 100. The U.S. Bureau of Labor Statistics weekly wholesale price index has also been moving lower and for the week ending February 8th stood at 156.9, back to the September, 1947, level. Since last October week to week fluctuations of this index have generally been downward.

Retail trade was also adversely affected, with department store sales for the week ending February 5th standing at four per cent below those of a year earlier. The Federal Reserve Board's seasonally adjusted index of sales stood at 290 for January as compared with 309 for December and a twelve-month 1948 average of 302. Two of the largest mail order houses reported business shrinkages of 10 and 11 per cent in January, 1949, compared with the same month of the previous year.

As offsetting these unfavourable factors it should be noted that there are many indications that U.S. industrial activity will continue for some time to come on a very high level. Disposable income for the month of November was equivalent to a seasonally adjusted annual rate of $197 billion, a new high record. The figure for November, 1947, was $179 billion. The rate of increase, 1947 to 1948, was, therefore, 10 per cent and during the same period the consumers price index increased only 4.4 per cent.

U.S. governmental expenditures on re-armament and on the products needed for the European Recovery Plan are also expected to sustain markets and to provide industrial activity in sufficient quantity to guard against any serious unemployment situation.

1949 World Wheat Outlook

Unless abnormal weather conditions are encountered during the northern growing and harvesting season it is predicted on data presently available that the world will reap an ample harvest of wheat during 1949. In the northern hemisphere, where at this time of year only very tentative estimates can be made, there are indications that acreage sown to wheat will exceed previous marks.

The United States Department of Agriculture estimates that in that country 61.4 million acres were seeded with winter wheat. This is five per cent above last year's record figure and 25 per cent greater than the last ten years' average. On the basis of December 1, 1948, conditions, the coming U.S. crop of winter wheat is forecast at 965 million bushels. Should this be realized plus an average crop of spring wheat the United States would for the third year in succession produce a crop of over 1.2 billion bushels of wheat — a yield considerably over its normal domestic and export requirements.

In Canada, too, there are substantial reasons for believing that the acreage seeded to wheat will exceed that of last year. Declines in the price of flaxseed and rye to-gether with the fact that the minimum initial payment to wheat growers has now been set at $1.75 a bushel are expected to cause significant acreage diversions from these crops to wheat. Further, if not too prolonged, a continuation of the present dry spell into the coming spring might cause the sowing of wheat at the expense of other grains which can not so well withstand the effects of moisture shortage.

Trade estimates indicate that the crop now about to be harvested in Argentina will amount to between 150 and 180 million bushels, down from 250 million bushels in the previous year. Australia expects to reap 200 million bushels, 20 million below last year, but still above the 1935-39 average of 170 million bushels.

These adverse developments are, however, in some measure offset by forecasts from European importing countries, from several of which have come reports indicating fall wheat sowings equalling or surpassing those of the previous year and fall weather conditions extremely favourable to seeding and germination.

(1) Not applicable to Column 5 "Average hourly earnings".

(2) Annual data as of June 1, monthly data as of November 9, 1946, March 1, May 31, August 16, November 8, 1947 and February 21, June 5 and September 4, 1948.

(3) See note on page 20.

(4) Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12.

(5) Includes retroactive payments to railway employees.

*Under revision.

---

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

* Averages of five weeks.

(1) Monthly averages or calendar months.

(2) Annual data as of middle of July. Monthly data for dates varying from 8th to 17th of month. February 1947 as of 22nd.

(3) Average quarterly statistics are given in the monthly section, except the recent data for exports which are monthly estimates.

(4) Interim index of retail prices, June 17, 1947 = 100. (5) Series revised, June 30, 1947 = 100.

(1) As of June 1. (2) Exclusive of stillbirths.

(3) Not applicable to figures on population.

(4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

---

(1) As of June 1. (2) Exclusive of stillbirths.

(3) Not applicable to figures on population.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

[1] Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

---

(1) Excluding producers' interchange.

(2) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(3) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Statistics for 58 municipalities are available in monthly and annual reports on the subject and in the Canada Year Book.

Value of Building Permits: by Provinces(1)

Issued by 507 municipalities

---

(1) The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

[1] Hollow blocks including fireproofing and load-bearing tile.

[2] Planks and boards.

[3] Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

---

(1) Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

(3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

(4) Includes customs exports of Canadian oatmeal and rolled oats.

---

(1) Available for January, April and August only.

(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

(5) Subject to revision.

---

(1) Does not include re-exports.

(2) This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.

(3) Other iron and steel has been revised to include iron ore.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

---

[1] Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

[2] Official holdings of Gold and U.S. dollars are given as of end of month in Statistical Summary of the Bank of Canada. *See footnote of page 106.

Carloadings of Revenue Freight on Canadian Railways

(1) The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of $500,000 or over.

(2) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

(3) For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scales

Railway Statistics

Railway statistics are always valuable barometers of economic conditions in a country. In Canada, however, they are of special significance, because the geographic structure of the country, the comparative paucity of population and the rugged terrain make us more dependent than almost any other country upon railroads for transportation.

Canadian railroad statistics are comprehensive, and fall into two main groups: those dealing with traffic — "car loadings" and "tonnage carried" etc. — and those covering financial accounts. Traffic statistics throw light on economic activity both in the country as a whole, in specific industries and within regions. Car loadings have a particular importance, because they are published weekly (as well as monthly) and are one of the few available weekly business indicators. These traffic figures also give a variety of information valuable to individual business men when facing specific problems. For example, produce merchants secure an idea of the movement to market of vegetable, fruit and dairy products; grain dealers, shipping interests, etc., have an indication of grain movement; while cattle loadings are most useful to packing houses and exporters.

The financial statistics of the railroads are naturally of interest to brokerage houses, to investors in the privately-owned systems, and to analysts of government finance. Their importance, however, spreads a good deal wider than this, because the financial position of the roads is one of the considerations in determining the level of freight rates, and there is no section of the economy which is not directly or indirectly affected by this problem.

Summary Tables in Canadian Statistical Review

Statistics covering car loadings, tonnage hauled, financial operating returns, passengers carried, number of workers employed and wages paid, etc. etc., are supplied to the Dominion Bureau of Statistics by the individual railroads. These including American systems running into this country, amount to thirty-two, but eighteen of them own or control less than one hundred miles of track each.

A summary of the principal figures appear in tables 52 and 53 of the *Canadian Statistical Review* (pp. 108 to 111). The first of these shows monthly car loadings of revenue freight loaded on Canadian railways by type of commodity broken down into nineteen categories. While it is the usual practice in the Review's tabular matter to supply comparable data for the ten years immediately past and for certain key years going back to 1926, this has not been done in this table since increases in the capacity of cars and improved techniques of loading have been so great that car loadings are not comparable over a long term of years. Car loadings are, however, given for the last thirty-eight consecutive months thus allowing for short term comparisons and observation of the rather striking seasonal variations in activity. The prime cause of such variations is, of course, the movement to the head of the Lakes and to both seaboards of vast quantities of grain in the fall of each year after the prairie harvest.

Table 53 presents in summary form the principal statistics available monthly on the financial results of the operations of the railways (not including hotel, steamships, etc.) together with a statement of the revenue freight and number of passengers carried. The yearly data are for *all* railways operating in Canada while the monthly data are only for those with annual operating revenue of $500,000 or over. These number sixteen, but during 1947 their operating revenues were 98.9 per cent of the total reported by all thirty-two systems.

The table shows revenues from both freight and passenger operations, operating expenses and net operating income for all systems and for the Canadian National and Canadian Pacific individually. Net operating income as shown in this table is not the difference between revenue and expenses since adjustment is made for tax accruals and for the rentals to be paid for the use of certain equipment and joint facilities. The amount of this adjustment is shown in the monthly report on operating revenues and expenses discussed below.

Weekly and Monthly Publications

The weekly report *Car Loadings* shows the number of cars loaded with revenue freight from Sunday to Saturday for all of Canada and for the eastern and western divisions (the break comes immediately west of Fort William). It is published on the Friday following the close of the week. Car Loadings are broken down by material loaded and comparable data are given for the two previous weeks and for the closest week of the previous year. Cumulative totals are also given for the current and the two previous years. An index number, based on the 1935-39 averages, is quoted for each of the last six weeks of the current year and for similar periods in the previous year. The total number of car loads received from foreign connections (i.e. U.S. Lines or shipping originating in a foreign port) is also shown.

Railway Revenue Freight Loadings, appearing three weeks after the close of the month, is a monthly preliminary estimate of the number of cars and tons of freight loaded. Loadings for each available month of the current year and for each month of the seven previous years are shown both as absolute numbers and as expressed by an index number based on the 1935-1939 period.

The last in the series of monthly publications dealing with revenue freight is the *Monthly Traffic Report of Railways of Canada,* a very detailed discussion of freight carried expressed in terms of tonnage only. It sets forth the volume of freight loaded in Canada during the month, the tonnage received from foreign connections destined both for delivery in Canada and in transit to foreign points. It gives both the month's figures and the cumulative totals to date together with the increase or decrease in tonnage from similar periods of the earlier year. Terminations, that is freight unloaded at stations in Canada and that delivered to foreign connections, complete the picture. The breakdown into commodities is considerably finer than that used in the weekly *Car Loadings* and is under five main divisions and seventy-eight sub-divisions.

The second portion of this publication shows tonnage loaded and unloaded in each of the provinces of Canada under a commodity breakdown identical with that outlined above. These statistics can in no way be taken as covering all interprovincial trade, since they exclude transfers of commodities by truck or water. Neither do then indicate the provincial origin of tonnage unloaded. Nevertheless they throw a useful light on whether a province is a net importer or exporter of certain commodities.

The last of the monthly publications, *Operating Revenues, Expenses & Statistics-Railways in Canada with Annual Operating Revenues of $500,000 or Over,* is published about sixty days after the close of the month. This presents in detailed form the material summarized in table 53 of the Review. It gives both financial and general operating statistics for all railways combined (subject to the $500,000 revenue reservation) and for the two largest Canadian systems individually.

Annual Publications

Several annual reports are also published. *The Summary of Monthly Railway Traffic Reports* is, as its title indicates, primarily a condensation of the monthly report already discussed but it contains in addition two rather interesting tables not elsewhere published. The first of these discusses, under the usual commodity breakdown, the freight originating and terminating in the area covered by the three maritime provinces of Prince Edward Island, Nova Scotia and New Brunswick. The second table deals similarly with origins and terminations in the western provinces of Manitoba, Saskatchewan, Alberta, and British Columbia, considered as a single entity. From these data net import from, and exports to the rest of Canada may be determined.

Statistics of Steam Railways in Canada is a complete presentation of all available statistical material on railway operations. It is issued about eight or nine months after the close of the year and contains in expanded form all the material to be found in the reports discussed above together with detailed reports on the financial structure of operating companies, numbers of employees and their earnings, analyses of fuel costs, maintenance costs, expansion costs, taxes paid, reports on accidents and deaths of or injuries to both passengers and employees, etc. The curren volume for the year ending December 31, 1947 consists of three pages of explanatory text an nineteen tables presented on 134 pages.

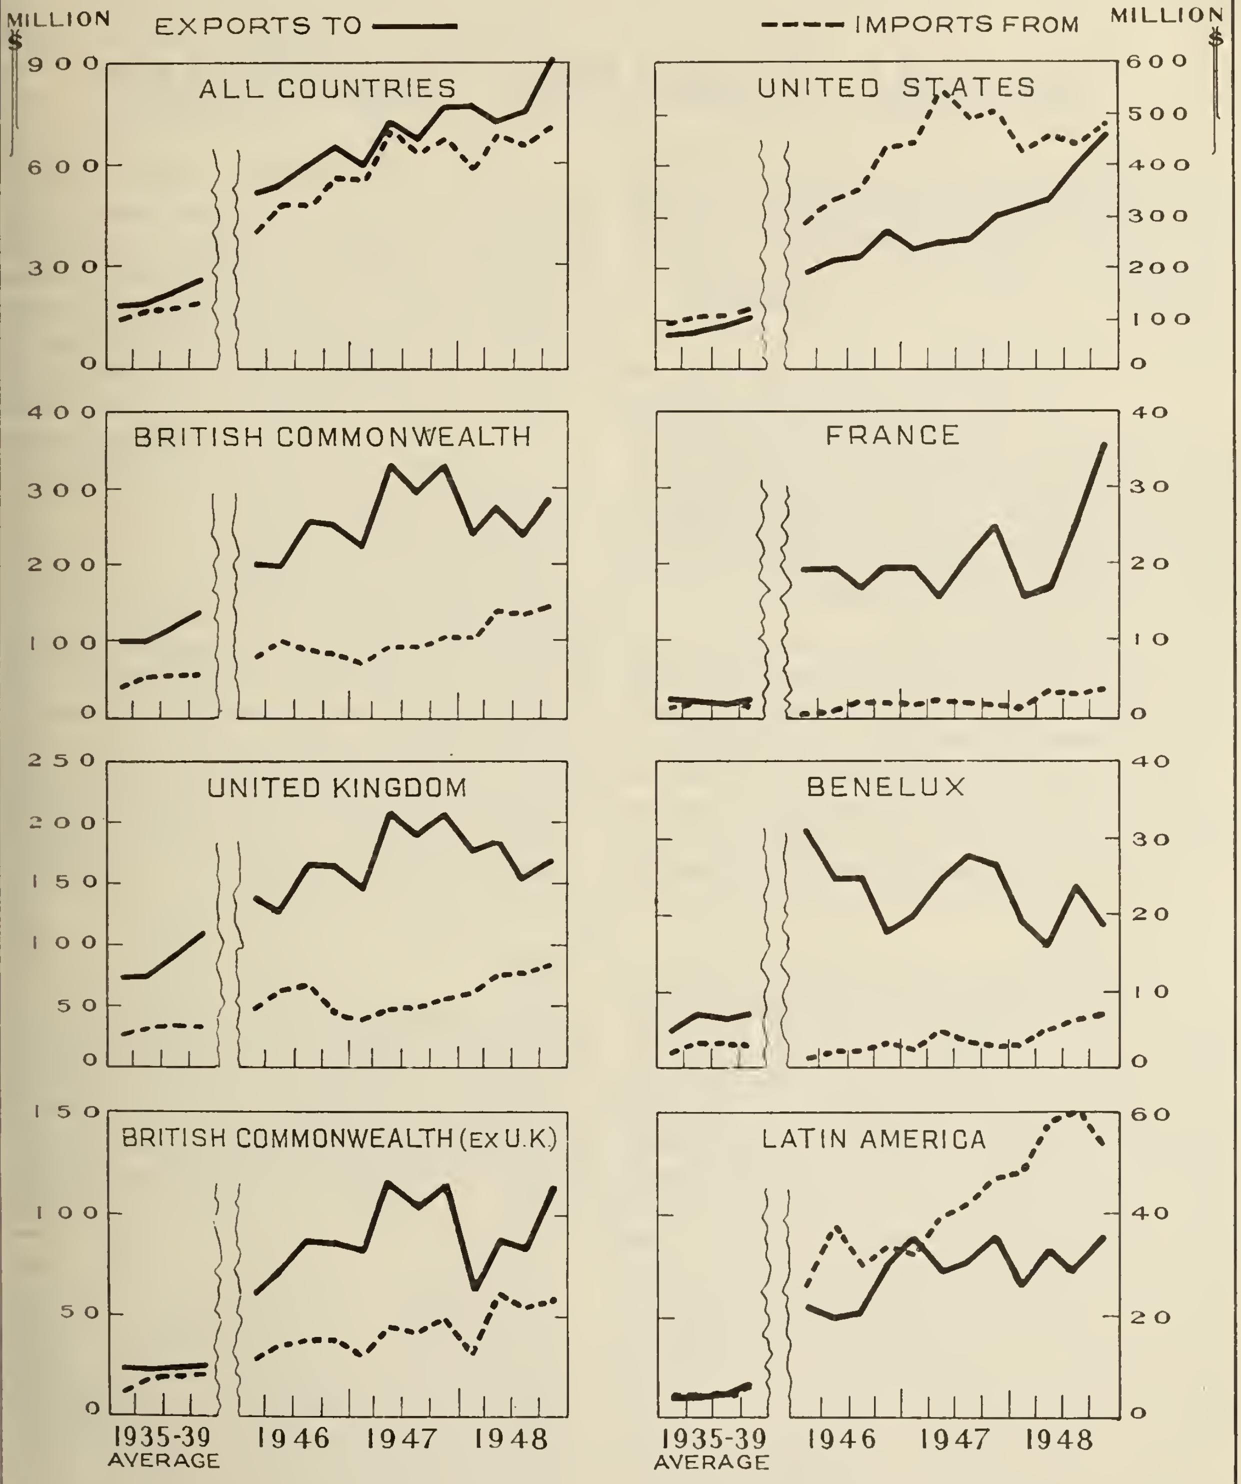
In addition, the Bureau of Statistics issue *Canadian National Railways (1923-1947)* an *Canadian Pacific Railway (1923-1947).* Thes present a brief historical survey of the revenue and expenses of the two systems and a con densation of operational statistics over th twenty-five year period since the incorporatio of the C.N.R. They are revised each year include the latest annual data and the C.P. statistics have been placed on a comparab basis with those of the C.N.R. by the inclusi of Express and Telegraph Departments, et

CANADA'S FOREIGN TRADE

PREWAR AND POSTWAR

QUARTERLY TOTALS

Note: - Different scales have been used in each chart.



Current Economic Conditions

The index of industrial production reached 184.1 in September, 1948, and held for the next three months between this figure and 185.7 reached in December. In January, 1949, it dropped 3.6% to 178.9. The sub-index for all manufactures was off 4.3% at 188.5 from 197.2 for December with that of non-durables off 4.1% from 180.2 to 172.7 and that for durables off 4.2% from 226.3 to 215.6. Manufacture of motor vehicles was primarily responsible for this decline, falling from 201.0 in December to 108.5 in January. This decline was caused, in part at least, by temporary shut downs for retooling purposes during January.

Railway car loadings of revenue freight totalled 289 thousand for February last, 300 thousand for January and 316 thousand for December. The comparable figures for the preceding year were 286 thousand in February, 317 thousand for January and 321 thousand for December (1947). Car loadings for the week ending March 19 totalled 72,991 compared with 74,194 for the previous week and 76,239 for the corresponding week last year.

The cost-of-living index stood on February 1 at 159.5 very slightly down from 159.6 in January. From September, 1948 to February, 1949, fluctuations in this index have held within the narrow range of 158.9-159.6. The general wholesale price index was off very slightly from December to January, as were the wholesale price indices of consumers' goods, producers' goods, industrial materials, and those for both partly and fully manufactured goods. The wholesale price index for general building materials ran against the trend increasing slightly. The wholesale price index number of Canadian farm products stood at 226.2 for January compared with 227.6 for December.

February merchandise exports were valued at $205 million, down about 1.5% from those of the same month in 1948. Sales of domestic products to the United States amounted to $106 million during the month compared with $94.8 million in February of last year, an increase of 12.6%. This was more than offset by declines in the sales to the United Kingdom which were off 14.7% from $51.7 million in February, 1948, to $44.1 million in February, 1949, and in sales to other European countries which dropped 33.2% from $25.9 million to $17.3 million.

Cash Farm Income Soars

A preliminary estimate of farmers' cash receipts from the sale of farm products in 1948 recently published by the Bureau indicates that this amounted to $2,450 million in 1948, $488 million or approximately 25% above the previous high record of $1,962 million establish in 1947. When payments under the Prairie Farm Assistance Act are included the comparable amounts are $2,470 million in 1948 and $1,974 in 1947. This cash income from the sale of farm products amounted in 1948 to almos four times the 1935-1939 average of $623. million.

High levels of domestic purchasing powe plus strong world demand combined to lif Canadian agricultural prices approximatel 20% above the 1947 levels and this fact togethe with increased supplementary payments an larger distributions by the Canadian Whea Board of participation payments, rather tha increased production, was responsible for tl farmers' higher receipts.

A 30% increase in the number of cattle ar calves marketed during the year, brougl about largely by removal of restrictions exports to the United States, and considerab higher prices made the sale of this commodi the greatest single source of income for t farmers in 1948. Sales of cattle and calves we valued at $433.7 million up 84.4% from $235.3 million in 1947.

Sales of wheat grown in 1948 amounted to $401.7 million while participations and adjustments from previous crops brought growers an additional $158.4 million, the comparative figures for 1947 being $346.8 million and $73.8 million. Sales of dairy products at 389.6 million and hogs at $300.8 million were next in order of importance during the last year.

Ontario, with an increase in farm income of $127.1 million from $541.3 million in 1947 to $668.4 million in 1948, showed the greatest absolute increase. Manitoba had the greatest percentage gain with a 33.9% increase from $181.4 million to $243.4 million.

Report on Retail Sales

The Dominion Bureau of Statistics has, over the past two years, completely revised its retail trade statistics on which the *Monthly Report on Retail Sales* was based. As a result of the revision this report has been discontinued and effective from January 1, 1949 has been replaced by *Retail Trade*, to be issued monthly. Whereas previously the dollar value of sales in various types of stores was reported in terms of index numbers, based on 1935-1939 = 100, the data will now be recorded in terms of dollar value directly. Sales for 20 different types of stores and for an "all other stores" group will be given.

Data for three groups of stores — food, country general and department — has been compiled on an annual basis from 1941 to 1946 inclusive, and on a monthly basis for 1947 and 1948. For all the other groups of stores the annual material has so far been compiled only for 1941, but when it is assembled for the other years it will be incorporated in a supplement to *Retail Trade*.

This revision of the report on retail sales has, of course, necessitated revision of table 45 of the *Canadian Statistical Review*, which starting with the present issue, will present a summary of the material to be found in the new report. This summary will, at present, show total sales in dollar value and the value of sales in the 16 most important types of stores, for the year 1941, 1947 and 1948 and for the last 25 months.

When all the 1942-1946 data is available it will be included in table 45. While the breakdown of sales by economic areas in the new report lists each of the prairie provinces individually, limitations of space require that the Review retain the former grouping of these provinces in a single unit.

Preliminary estimates based on the new series indicate that Canada's retail trade for 1948 totalled $7,276 million, up 10.9% above the total of $6,563 million for 1947 and 111.7% above the 1941 figure of $3,437 million. The Bureau's 1948 index of retail prices was up 19.2% from the 1947 figure and 54.4% above that for 1941.

Improvements in the Balance of Payments

The two outstanding developments in Canada's balance of international payments during 1948 were the substantial increase in the overall surplus with all countries and the even more marked decrease in the deficit with the United States. The latter, together with other factors, permitted Canada nearly to double her U.S. dollar reserves during the year. The elements contributing to these changes were discussed in the report recently published by the Bureau, *The Canadian Balance of International Payments, Preliminary Estimate, 1948*, and in the *Annual Report of the Foreign Exchange Control Board, 1948*. They are summarized in the tables on page vi.

Canada's surplus on current account transactions with all countries amounted to $453 million (excluding shipments of official relief), compared with $47 million in 1947. Total receipts from all countries amounted to $4,139 million in 1948 compared with $3,746 million in 1947, while total current payments were $3,667 million in 1948 compared with $3,661 million in 1947. The increase in the surplus was largely accounted for by merchandise exports expanding more rapidly than merchandise imports, but in addition "invisible exports" (i.e. receipts from tourist trade, freight and shipping, etc.) all showed an increase in 1948 over 1947 whereas "invisible imports" (payments on interest and dividends, expenditures of Canadian tourists abroad, etc.) declined alightly. The substantial increase in exports of merchandise, however, was almost

entirely due to higher prices rather than greater volume; the indications are that the volume of merchandise exports in 1948 was about the same as in 1947 and the volume of imports about nine per cent less.

Important changes took place in the geographical distribution of Canada's merchandise trade, particularly in regard to the destination of exports. These changes are shown in the following table:

DESTINATION OF CANADA'S MERCHANDISE EXPORTS

(percentages of total exports)

	United States	United Kingdom	Other Sterling Areas	Other E.R.P. Countries	Other Countries
1935-1939	37%	37%	10%	7%	9%
1947	39	28	13	12	8
1948	50	23	10	10	7

ORIGIN OF CANADA'S MERCHANDISE IMPORTS

(percentages of total imports)

	United States	United Kingdom	Other Sterling Areas	Other E.R.P. Countries	Other Countries
1935-1939	61%	18%	11%	6%	4%
1947	77	7	6	3	7
1948	69	11	7	3	10

Relatively few changes took place in the type of goods exported from Canada, although there was a substantial increase in shipments of beef and beef cattle and coarse grains to the United States following the removal and relaxation of export controls. By far the greater majority of our exports were, as normally, basic commodities, mainly unprocessed or semi-processed, and in spite of the great industrial expansion in Canada during the war it has proved difficult to maintain as much of an increase in exports of manufactured products as had been hoped. During 1948 there was some increase in the volume of these goods sent to the United States, but this was offset by a decrease in exports of them to other countries, which, in view of their dollar shortage, are trying to limit their imports from the Western Hemisphere to those necessary goods, such as food stuffs and raw materials, not obtainable elsewhere.

Transactions by Regions

The increase in exports to the United States and the decrease in imports from that country were the major causes of the improvement in our dollar position. Our current account deficit with the United States in 1948 was $401 million, compared with $1,135 million in 1947. The debit on merchandise trade was reduced from $903 million in 1947 to $289 million in 1948; there were also slight reductions in the debits for interest and dividends, freight and shipping, and other items, and increases in the credit from tourist expenditures and exports of newly mined gold.

On capital account with the United States there was a net credit to Canada of $127 million. In addition $770 million was received in convertible exchange from countries other than the United States, and in total these various amounts increased Canada's holdings of gold and United States dollars by $496 million (from $502 million to $998 million). This compares with a decrease of $743 million during 1947.

In transactions with the United Kingdom, Canada's current account surplus declined from $633 million to $488 million. While to some extent this was caused by a decline in exports (down to $923 million from $967 million) it was mainly due to an increase in imports

($435 million compared with $334 million), a healthy development. With the sterling area as a whole and other E.R.P. countries, however, the trend was not so good. Canada's current account surplus with those countries declined from $1,148 million in 1947 to $846 million in 1948, the change being covered by a decrease in exports to those countries of $156 million and an increase in imports of $148 million. When transactions with the United Kingdom are excluded, it emerges clearly that the rest of the sterling area and E.R.P. countries have used restriction of imports to decrease their debit balance with Canada rather than increasing sales of their products to us.

Disturbed Condition in World Trade

Here lies a serious problem concerning not only Canada but the whole future of world multilateral trade. As the report of the Foreign Exchange Control Board points out, the desirable way for the sterling area and E.R.P. countries to correct their dollar shortage is to increase their exports to the Western Hemisphere rather than to curtail their imports. Unfortunately, however, under the stimulus to reduce as far as possible their need for E.R.P. assistance, these countries have recently increased restrictions on imports from North America and have entered into a variety of bilateral trade and currency arrangements designed to facilitate trade between themselves. Much of this trade is being carried on at prices higher than would be the case if North American countries were free to compete for it, with the result that the cost and price structures of these countries are being steadily raised. This will make it progressively harder for them to sell their goods in the North American markets and this make the eventual achievement of free multilateral trade more difficult.

In addition to these restrictions on Canada's exports, there are other matters to be considered. For example, if wheat should be declared surplus in the United States, this would automatically prevent the use of E.R.P. funds by European countries for the purchase of Canadian wheat, which has been a substantial source of convertible exchange from abroad. Then again, the great improvement in our balance with the United States during 1948 was to a some degree the result of restrictions placed on the import of consumers' goods and capital equipment and on Canadians travelling in the United States; some of these restrictions have already been removed and others relaxed and some increase in imports has already taken place.

The problems posed to Canada by the disturbed state of world trade were referred to by the Minister of Finance in his budget speech. He mentioned that some people might suggest that Canada should follow the lead of other countries and embark on bilateral agreements, but he pointed out, with supporting argument, that this could only give short-run benefit and would in the long-run be most detrimental to our trading position. He referred, as a positive approach to the problem, to meetings being held at Annecy to enlarge the scope of the Geneva Trade Agreements, and that the Government hopes that when the legislation now before the United States Congress to extend the Reciprocal Trade Agreements Act is passed it will be possible to conclude a further agreement with that country to open up wider possibilities for the export of Canadian manufactured goods.

(1) Not applicable to Column 5 "Average hourly earnings".

(2) Annual data as of June 1, monthly data as of March 1, May 31, August 16, November 8, 1947 and February 21, June 5, September 4 and November 20, 1948.

(3) See note on page 20.

(4) Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12.

(5) Includes retroactive payments to railway employees.

(6) Conversions are included with annual data only.

(7) See pages 94 and 95.

*Under revision.

---

[1] Personal income is given on an annual basis for months as well as for years.

[2] Includes army civilian supply exports from February 1947.

[3] Annual totals are averages of end of month figures.

[4] Standard and Poor's Corporation. The series currently used represents 416 stocks.

Significant Statistics of United Kingdom

* Averages of five weeks.

(1) Monthly averages or calendar months.

(2) Annual data as of middle of July. Monthly data for dates varying from 8th to 17th of month. February 1947 as of 22nd.

(3) Average quarterly statistics are given in the monthly section, except the recent data for exports which are monthly estimates.

(4) Interim index of retail prices, June 17, 1947 = 100. (5) Series revised, June 30, 1947 = 100.

---

(1) As of June 1. (2) Exclusive of stillbirths.

(3) Not applicable to figures on population.

(4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) As of June 1. (2) Exclusive of stillbirths.

(3) Not applicable to figures on population.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

(1) Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

(2) Excluding producers' interchange.

(3) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(4) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

---

(1) The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

---

(1) Hollow blocks including fireproofing and load-bearing tile. (2) Planks and boards.

(3) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

---

(1) Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

(3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

(4) Includes customs exports of Canadian oatmeal and rolled oats.

(1) Available for January, April and August only.

(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4) Prior to 1941 prices were quoted on a live weight basis.

(5) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

(6) Subject to revision.

---

[1] Does not include re-exports.

[2] This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.

[3] Other iron and steel has been revised to include iron ore.

Merchandise Exports by Commodities[1]

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

Factors in the Balance of Payments

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of month in Statistical Summary of the Bank of Canada.

*See footnote of page 106.

(1) The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of $500,000 or over.

(2) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

(3) For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scales.

The Incorporation of Newfoundland Data into Canadian Statistics

Much work needs to be done and a number of problems solved before all statistics relating to Canada can include the appropriate Newfoundland figures. In some instances new reporting systems need to be set up and in others the existing systems require modification to make the returns comparable to Canadian series. In cases where figures can be quickly incorporated, this will of course be done. In all reports issued by the Dominion Bureau of Statistics covering figures subsequent to March 31 a notation will show whether or not Newfoundland is included.

Precise information as to when figures of Newfoundland can be brought into the various series cannot yet be given, but the following is some indication of the outlook. Statistics of births, deaths and marriages, foreign trade, banking, bank clearings, insurance, railroads and shipping are all expected to include Newfoundland figures as from April 1. It is hoped that the August Labour Force Survey will contain Newfoundland data, and that fishing, forestry and mining statistics will be incorporated within a few months. In prices, employment and earnings statistics it is unlikely that Newfoundland figures can be included during the current year. The cost-of-living index for St. John's, Newfoundland, will be published separately, and the Canadian cost-of-living index will, for the time being, continue to cover only the nine provinces. Monthly figures published by the Industrial and Merchandising Division will include Newfoundland data as soon as feasible, but the annual Census of Industry and Merchandising will do so only when the 1949 figures are available.

In addition to the difficulties of collecting current Newfoundland statistics on the same basis as those compiled for the other nine provinces, a further problem is raised by the need for obtaining comparable back figures for Canada as a whole. In certain statistical fields — fish landings, pulp and paper, for example — the addition of Newfoundland will radically change the total for Canada and will place current statistics on a basis substantially different from previous data. Where possible, of course, the ideal solution is to obtain historical data for Newfoundland comparable to that for the rest of Canada and add it to the "Canada totals" for previous years. In many cases, however, this information will be either unobtainable or will take considerable time to assemble, and here the total for Canada ex-Newfoundland will be shown in addition to a Canada total for the ten provinces, thus preserving historical comparability.

Incorporating Newfoundland statistics into the *Canadian Statistical Review* may raise some technical problems of "make up". Where it is necessary to add only one column it can be done in the tables as they now stand, but where two additional columns are required — one for Newfoundland and one for Canada ex-Newfoundland — there may not be room in the existing tables. To recast these pages table by table would be an expensive process, and so in such cases it is planned to include the information in supplementary tables at the back of the publication, and then when information is available for the inclusion of figures in all tables for which they are appropriate, a general re-arrangement will be undertaken. Full details concerning the inclusion of Newfoundland statistics in the Review will be given from time to time as the material becomes available.

The Bureau has recently published and is in the process of publishing certain special bulletins on Newfoundland. A Census of Newfoundland was undertaken in 1945, and at the request of the Newfoundland Government the results were tabulated in the Dominion Bureau of Statistics. Three bulletins reporting certain of these results have now been published — *Population of Newfoundland by Sex for Districts and Settlements; Gainfully Occupied, Classified according to Occupation and Industry, by Industrial Status and Sex, for Newfoundland and Census Districts;* and *Census of agriculture by Districts* — and other bulletins will shortly be issued covering such subjects as age, marital status, religion, birthplace, literacy, schooling, etc. Another bulletin entitled *Newfoundland: Statistical Background* will be available within the next few weeks, giving information on population, vital statistics, resources and industries, occupations, employment and income, prices, foreign trade, transportation and communication, public finance, education and social services.

Newfoundland: Some Salient Facts

Canada's newest province consists of 42,734 square miles on the Island of Newfoundland itself and an additional 112,000 square miles of rugged terrain on the mainland of the North American continent. The latter territory is known as Labrador and its precise boundaries were defined by a Privy Council decision of 1927. The new province thus has a total area of 154,734 square miles and ranks seventh in size in the Dominion, being larger than any of the original three Maritime Provinces and smaller than any of the others.

The island is roughly in the shape of an equilateral triangle with each of the three sides measuring approximately three hundred miles in length. Due to its extraordinarily serrated condition the island's coast line measures approximately 6,000 miles and is dotted with no less than 1,300 small settlements each containing as a rule from 10 to 50 families. These hamlets are accessible only by water and are dependent on the fishing industry for their existence.

A census taken in 1945 placed the population at the time at 321,819, of whom only a handful inhabit the Labrador mainland. More than 35 per cent of the entire population resides on the Avalon Peninsula (see map on opposite page). Here is located the capital city of St. John's with a municipal population of about 45,000 and a metropolitan area housing 57,000 persons. There are 25 other communities with populations of over 1,000, the chief of these being Port-Aux-Basques and Corner Brook on the west coast, Grand Falls and Buchans in the interior and Bell Island on Conception Bay off the Avalon Peninsula.

Prior to confederation with Canada, Newfoundland to a greater extent than any other country in the world depended for her very existence on foreign trade. With very little agriculture and with only a] very small manufacturing industry, she imported nearly all the consumer goods used by her people, paying for them through the export of the products of her three great primary industries, fishing, forestry and mining.

Neither the climate nor the soil lend themselves to intensive agricultural operations and what farming there is, is chiefly of the subsistence type. No less than 16,000 of the 36,000 persons, who in the most recent census reported themselves as cultivators of soil, farm less than one acre of ground each. These are, of course, persons engaged principally in some other occupation, usually fishing or logging, who grow a few vegetables to augment their purchases of staple foodstuffs, a step made necessary by the comparatively high cost of foods, nearly all of which are imported either from Canada or from the United States.

Some Foreign Trade Figures

During the fiscal year ended March 31, 1948, imports into Newfoundland were valued at approximately $105 million while exports were placed at $78 million. Total foreign trade was therefore at the rate of about $570 per capita. As comparative data it should be observed that Canada, which also depends to a very large extent on her foreign trade, had, during the calendar year 1948, a corresponding turnover amounting to $397 per capita. Newfoundland's figures for the fiscal year ended March 31, 1947, were: imports $75 million and exports $69 million, a turnover of $449 per capita. The yearly averages for the five-year period immediately prior to the outbreak of war were: imports $23 million and exports $30 million; per capita turnover of $183. The adverse trade balances encountered since the beginning of the war have been offset by Canadian and American expenditures in dollars in connection with military operations and by expenditures by the U.S. on both capital and current accounts in connection with bases leased by that country for future defense purposes.

During the fiscal year ended March 31, 1948, the last for which figures are yet available, Canada supplied Newfoundland with $55 million worth of goods while the United States supplied a further $40 million worth. Thus the two together met more than 90 per cent of Newfoundland's need. Foodstuffs accounted for 32 per cent of the value of all goods imported into the island while textiles and clothing accounted for a further 11 per cent. Newfoundland's recent prosperity and expanding economy is highlighted by the fact that during the last fiscal year more than $25 million worth of machinery and vehicles were imported.

It should be noted that confederation with Canada will involve Newfoundland in no currency difficulties since the Canadian dollar has been the sole legal tender since 1894. Four of the largest Canadian banks already maintain 35 branches throughout the island.

Exports of Primary Products

The fishing industry has been, and in all probability will remain for some considerable time to come, the backbone of Newfoundland's economy. Approximately 28 per cent of all gainfully employed males are engaged in it and fishery products usually account for more than 40 per cent of Newfoundland's exports. During the fiscal year 1946-47 fishery products exported were valued at $31 million while in 1947-48 they were valued at $29 million. Dried and salted cod account for the value of about half of all fishery products sent out of the island. In recent years group marketing of cod has been in force with the Newfoundland Associated Fish Exporters Ltd. (NAFEL) operating under the supervision of the governmentally established Newfoundland Fisheries Board. The chief markets for fishery products are Canada, United States, West Indies, Portugal, Spain and the Latin American countries.

Next in importance in Newfoundland's economy are the products of the forest. About 16,000 square miles (approximately 40 per cent of the island's area) are well timbered and could support logging operations although only about half of this is presently accessible to working parties. Two pulp and paper mills, one at Corner Brook and the other at Grand Falls, operate on the island and exports of paper and paper products during the year 1947-48 amounted in value to $26 million, with the United Kingdom and the United States taking the bulk of the shipments. Lumber for domestic use (nearly all buildings are of wooden construction) is supplied by the 900 small saw mills which dot the island. The various phases of forestry operations taken as a whole provide employment for about 12 per cent of Newfoundland's employable males.

The paper mills referred to above are of modern construction and design, having been erected after the end of the first war by British interests desirous of assuring themselves of an adequate supply of newsprint and other printing stock.

Mining is the third of the industries on which Newfoundland so largely depends and its production during 1947-48 had a value of approximately $20 million. Practically all mineral production is exported, the principal items being iron ore, and lead, copper and zinc concentrates. Iron ore to the value of ove $5 million was exported during last year. The output was divided almost equally between th United Kingdom and Canada with this Dominion's share going to the steel plants of Nova Scotia.

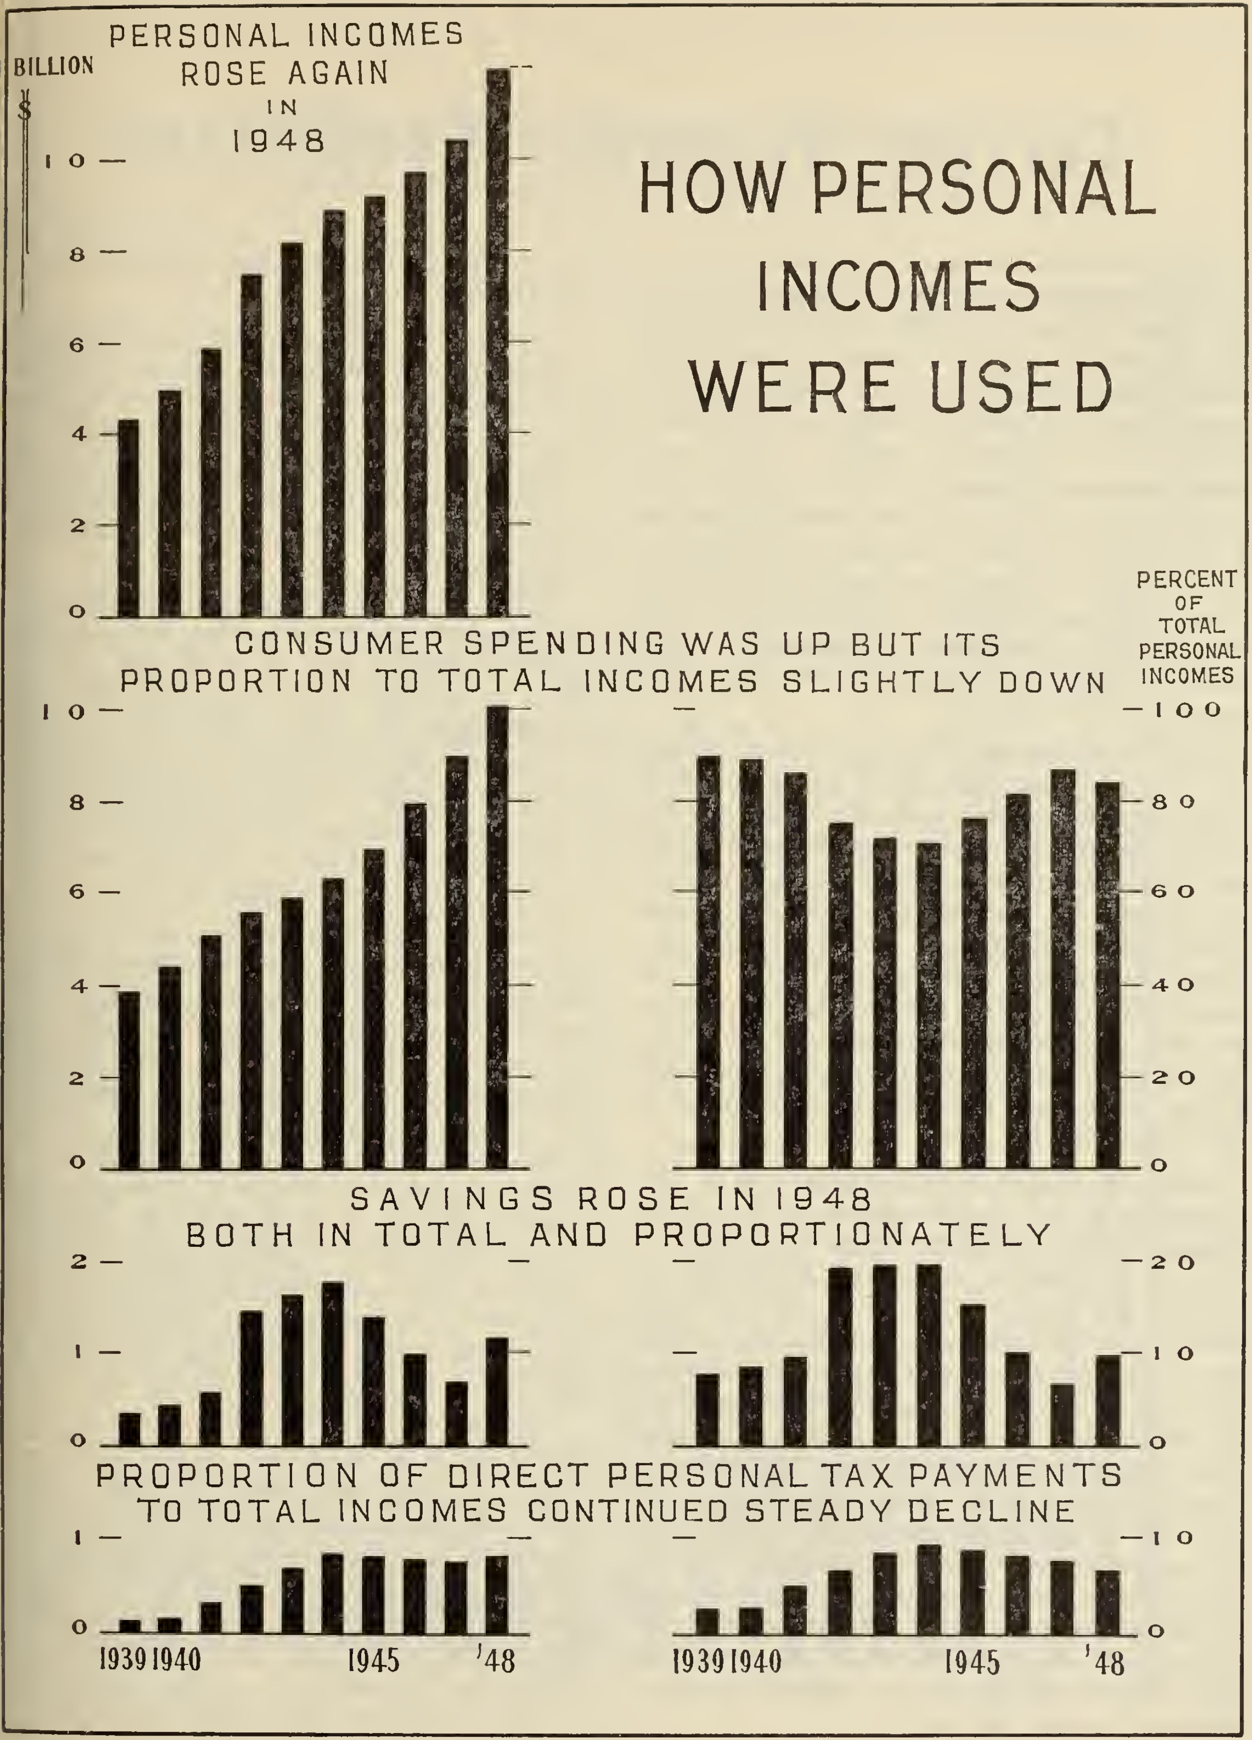
Copper concentrates to the value of $1.5 million were shipped during the year, with nearl all of it going to the east coast refineries of th United States. That country also took approximately half of the $5 million worth of lead concentrates with the remainder going in larg measure to the Belgian refineries. Abou $2.5 million worth of zinc concentrates wer shipped during the year with Belgium, France United States, Norway and the United Kingdo being the principal markets.

Transportation and Communication

Newfoundland finds herself in the somewha paradoxical position of having excellent lines o communication to the rest of the world bu very poor internal transport. Situated at th mouth of the St. Lawrence much of the world' shipping passes within comparatively shor distance of her shore and her water commu nications with Canada, the United States an the United Kingdom, the three countries wit which she chiefly deals, are more than ade quate. Gander, one of the world's greates airports, is on her east coast and negotiation are underway to determine what airlines will i the future not only use the landing field as fueling depot but will also actually serve th residents of the island.

Internally, Newfoundland is served by onl one railroad which, with several short spurs t off mainline points, links Port-Aux-Basques o the west coast with St. John's on the eas There are, except in the immediate vicinity the larger towns, few highways capable supporting motor traffic. Along the coast the are hundreds of small villages only a few mil apart but which can be reached only by wat transportation since the scarcity of populatio combined with extremely difficult terrai renders road construction unfeasible.

The city of St. John's maintains two dai newspapers and there are weeklies published i several other communities. Radio is t important mass medium of communicati and the island at present has six station Three of these were owned by the Newfoun land Government and will be incorporated in the C.B.C. system.



HOW PERSONAL INCOMES WERE USED

PERSONAL INCOMES ROSE AGAIN IN 1948

CONSUMER SPENDING WAS UP BUT ITS PROPORTION TO TOTAL INCOMES SLIGHTLY DOWN

SAVINGS ROSE IN 1948 BOTH IN TOTAL AND PROPORTIONATELY

PROPORTION OF DIRECT PERSONAL TAX PAYMENTS TO TOTAL INCOMES CONTINUED STEADY DECLINE

Current Economic Conditions

The generally consulted indicators of economic conditions continue to reveal little if any signs of a marked trend in either direction. The seasonally adjusted index of industrial production, which in January dropped rather sharply from a plateau of 184.1 to 185.7 established in the autumn months, moved one point higher in February to 179.4. This figure is slightly lower than the 1948 monthly average of 181.5 but is higher than the 1947 average of 175.5. The sub-index on the production of motor vehicles, which in January fell to 108.5 from 201.0 in December, recovered to 141.2 following brief shut downs for retooling purposes.

Freight car loadings for the week ending April 16, 1949, totalled 64,776 compared with 71,997 for the previous week and 73,491 for the week before that. For the week ending April 17, 1948, the figure was 74,657. There is no doubt that freight car loadings were affected by the Good Friday holiday but that nevertheless a downward trend is making itself felt. In the United States where the holiday is not so generally observed loadings were 765,890, down 2.4 per cent from those of the previous week and 11.5 per cent from those of the corresponding week last year.

There was a substantial contraction in employment in the major industrial groups in January with the index number standing at 191.3 on February 1, compared with 196.0 on January 1. This downward movement is in accord with the seasonal trend observed during eight of the last 11 years. The percentage loss of 2.4 per cent in the index number is similar to that established on February 1, 1948. The most recent figure is, however, the highest ever reached on this date. The index of employment in manufacturing stood on February 1 unchanged from the January figure of 202.7. Expenditures on weekly salaries and wages in the larger manufacturing establishments rose 4.3 per cent above that of January, when the situation was influenced by yearend holidays, taking of inventories, etc.

Unemployment Insurance Payments Are Higher

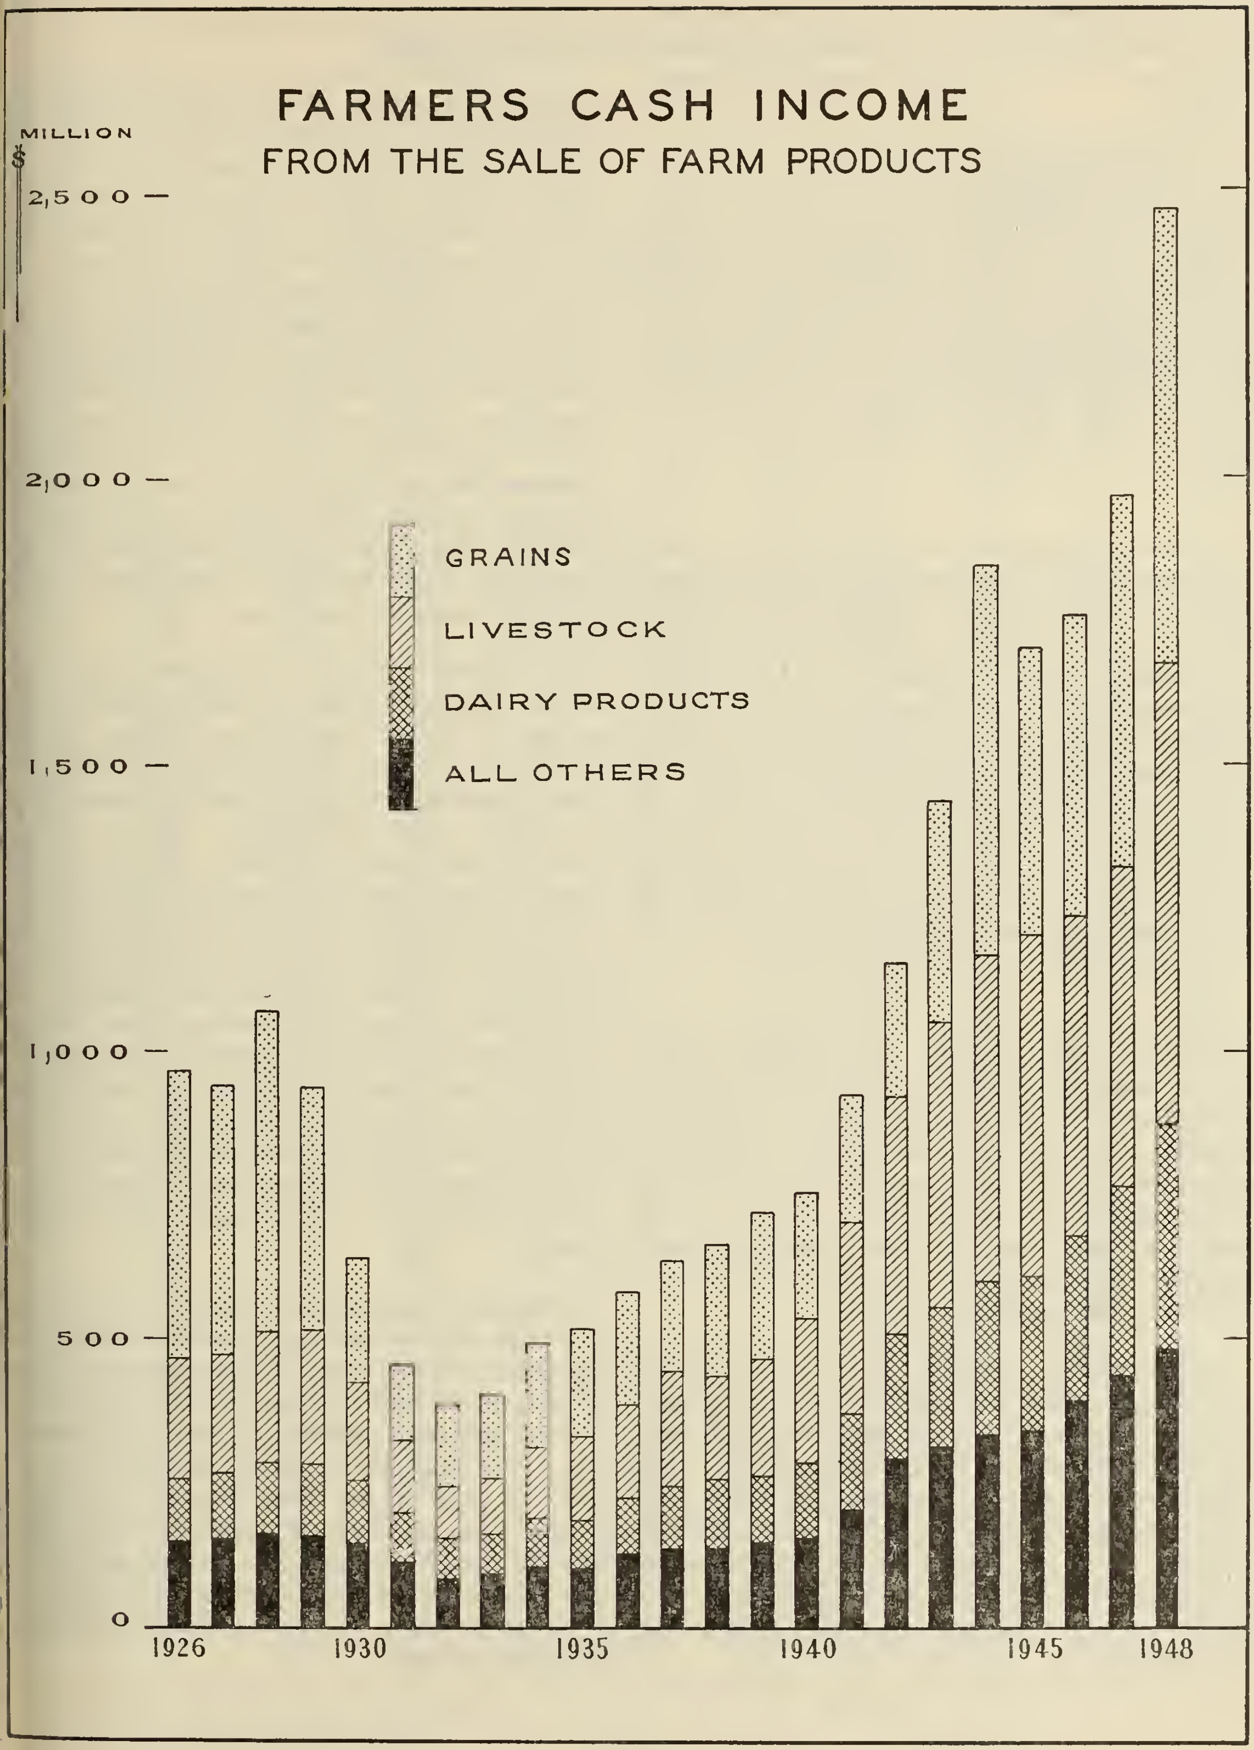
Payments to persons under the terms of the Unemployment Insurance Act in February, 1949, amounted to $8,158,903. The comparative figure for January was $6,727,221 and for February, 1948, $5,017,492. Payments were made to 210,681 individuals and were in respect to 3,734,487 days of involuntary compensatory unemployment.

During the month of February 108,759 claims (including 15,296 revised claims, i.e. reconsiderations of existing claims) for benefit were filed which indicates that approximately 93,500 people formerly employed in an insurable occupation were laid off and are seeking employment. Claims during the same month of the previous year were 88,016 (11,293 revisions) while in January, 1949, 140,305 claims (13,656 revisions) were registered.

The fact that more claims were made in January than in February, of course, indicates that layoffs during the earlier month were at a more severe rate than in the latter. The higher payment in February, on the other hand can be interpreted as indicating that those earlier laid off were, to a substantial extent, unable to obtain employment and remained on the register throughout February. This conclusion is borne out by the fact that the number of persons signing the register (i.e. stating that they were not employed) numbered 215,884 on February 28 and 203,417 on January 31. The comparable figure for February 29, 1948, was 153,353.

Foreign Trade Data

The International Trade Division of the United States Department of Commerce has estimated that the world's total foreign trade amounted in 1948 to $51,000 million, the comparative figure for 1947 being $48,000 million. The Division points out that this approximately 6 per cent increase in dollar volume was not as great as was the estimated 10 per cent



FARMERS CASH INCOME

FROM THE SALE OF FARM PRODUCTS

increase in world price levels between the two years; consequently the estimate indicates a shrinkage in the physical volume of world trading.

This shrinkage in the physical volume of trade is noticeable also in Canada where during the first two months of 1949 the dollar volume of foreign trade was about five per cent above the value of the 1948 totals. Canada's total foreign trade for the month of February, 1949, was valued at $411 million, 5.3 per cent above the February, 1948, total of $390.5 million. The January, 1949, total was $460.8 million, 4.4 per cent above the January, 1948, figure of $441.5 million.

February imports for consumption were valued at $206 million and exports of domestic products at $205 million. Re-export of foreign goods to the value of $2.2 million gave Canada a favourable trade balance of $1.2 million the lowest recorded since the unfavourable balance of $11.6 million reached in April, 1948. In February of last year a favourable balance of $28.1 million was recorded. The increase in trade volume in February, 1949, over the same month in the previous year was caused entirely by a sharp rise in imports which advanced 13 per cent from $182.2 million in the previous year to $206 million for February, 1949.

Imports from the United Kingdom were valued at $22.9 million, in February last, $2.5 million below those of January but $5 million above those in February, 1948. Canada's balance of trade with the United Kingdom amounted to $21.4 million when re-export of foreign goods are taken into account, since exports to that country were valued at $44.1 million. The balance in Canada's favour in February, 1948, was $33.9 million.

Our February imports from the United States were valued at $106.7 million, $9.3 million below those of January, 1949, but $11.9 million above the figure for February, 1948. The cumulative adverse trade balance with the United States for the first two months of 1949, allowing for re-export of foreign goods, amounted to $87.9 million. In the first two months of the previous year the figure was $83.7 million.

Net Income from Farming Operations

In the March issue of the *Canadian Statistical Review* it was pointed out that farmers' cash income from the sale of farm products in 1948 had reached a new high record. Figures now at hand indicate that the net income of farm operators from farming operations also reached a new high during the past year. Net income is defined as cash income from the sale of farm products (including grain participation payments) *plus* income in kind (that is farm produce used by the farm family, allowance fo house rent where the farmhouse is owned b the farmer, wood cut from the farm acreag and used for fuel, etc.) *plus* or *minus* inventor changes at the year's end *minus* operating costs and depreciation *plus* any supplementar payments made under the provisions of th Prairie Farm Assistance Act.

The gross income, including both cas income from the sale of farm products an income in kind, was $2,756 million in 1948 $2,192 million in 1947 and $1,999 million i 1946. Operating expenses and depreciation fo the same three years were $1,084 million $968 million and $855 million. Net income fo each of the three years was $1,693 million i 1948, $1,235 million in 1947 and $1,161 in 194 Included in these totals are supplementar payments of $21 million, $12 million an $17 million. It will be observed that 1948 ne income was 37.1 per cent above that of 1947 an 45.8 per cent above the 1946 figure. Concurrentl with the rise in gross income the ratio whic operating expenses and depreciation bore to i has dropped. This stood at 39.3 per cent i 1948, 44.2 per cent in 1947 and 42.8 per cent i 1946.

Turning to operating expenses it is note that the major items are purchase of feed an seed and hired labour. The former cost Canadian farmers $287 million in 1948, $242 millio in 1947 and $195 million in 1946. Labour cos were $160 million, $157 million and $139 mi lion for each of the three years. 1948 depr ciation charges were estimated at $112 millio divided into building depreciation $43 millio and machinery depreciation $69 million. T 1947 depreciation was $103 million and that 1946 $100 million.

---

(1)Not applicable to Column 5 "Average hourly earnings".

(2)Annual data as of June 1, monthly data as of March 1, May 31, August 16, November 8, 1947 and February 2 June 5, September 4 and November 20, 1948.

(3)See note on page 20.

(4)Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest emplo ment (overtime included) reported by manufacturers to the annual Census of Industry. For period begi ning in 1945, see table 12.

(5)Includes retroactive payments to railway employees.

(6)Conversions are included with annual data only.

(7)See pages 94 and 95.

*Under revision.

---

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

* Averages of five weeks.

(1) Monthly averages or calendar months.

(2) Annual data as of middle of July. Monthly data for dates varying from 8th to 17th of month. February 1947 a of 22nd.

(3) Average quarterly statistics are given in the monthly section, except the recent data for exports which are monthly estimates.

(4) Interim index of retail prices, June 17, 1947 = 100.

(5) Series revised, June 30, 1947 = 100

---

(1) As of June 1. (2) Exclusive of stillbirths.

(3) Not applicable to figures on population.

(4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

---

(1) As of June 1. (2) Exclusive of stillbirths.

(3) Not applicable to figures on population.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

---

(1) Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

(2) Excluding producers' interchange.

(3) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(4) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Statistics for 58 municipalities are available in monthly and annual reports on the subject and in the Canada Year Book.

Value of Building Permits: by Provinces[1]

Issued by 507 municipalities

---

[1] The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1) Hollow blocks including fireproofing and load-bearing tile. (2) Planks and boards.

(3) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

Above data revised in large measure, differing from the version appearing in the March number.

(1) Does not include Supplementary Government Payments made under Prairie Farm Assistance Act, Prairie Farm Income Act and Wheat Acreage Reduction Act.

(2) Includes total adjustment payments made by grain companies on oats and barley delivered by western producers during period August 1 to October 21, 1947. These payments are not available on a quarterly basis.

Above data revised in large measure, differing from the version appearing in the March number.

---

(1) Does not include Supplementary Government Payment made under Prairie Farm Assistance Act, Prairie Farm Income Act and Wheat Acreage Reduction Act.

(2) Includes total adjustment payments made by grain companies on oats and barley delivered by western producers during the period August 1 to October 21, 1947. These payments are not available on a provincial or quarterly basis.

(1) Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

(3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

(4) Includes customs exports of Canadian oatmeal and rolled oats.

---

[1] Available for January, April and August only.

[2] Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

[3] Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

[4] Prior to 1941 prices were quoted on a live weight basis.

[5] Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

[6] Subject to revision.

---

[1] Does not include re-exports.

[2] This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.

[3] Other iron and steel has been revised to include iron ore.

Merchandise Exports by Commodities[1]

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of month in Statistical Summary of the Bank of Canada.

*See footnote of page 106.

(1)The annual statistics embrace all steam railways, while monthly data refer to railways with annual operat revenues of $500,000 or over.

(2)Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent equipment and joint facilities.

(3)For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling $29,085,087, pai September, were not included in that month's operating expenses. Payrolls as now reported monthly according to the new wage scales.

---

(1) Prior to 1941 statistics are for shipping year ended March 31. (2) Annual data are averages of nine month

(3) Excludes Canada-United Kingdom Route.

(4) Annual data include tugs. The data of registered tonnage were revised for 1948 to cover clearings only, thu ensuring comparability with the statistics for other periods.

Unemployment Insurance Statistics

The Dominion Bureau of Statistics, through he medium of several publications and a table n the *Canadian Statistical Review*, presents, both montly and annually, statistical data on he activities of the Unemployment Insurance Commission. (See table 15 on page 40 of the current issue of this Review.) These data should be of interest to every Canadian since the economic health of the community requires a state of approximately full employment.

To labour organizations and their officials, o employers of insured persons, to manuacturers, to traders and distributors and to nany other specialized groups the material contained in the Bureau's reports are of more han ordinary importance. Slightly more than 0 per cent of the total Canadian labour force and approximately 75 per cent of all paid workers are insured persons. It follows, therefore, hat from details of unemployment within the nsured group the total incidence of unemploynent can be estimated currently since unmployment outside the "insured population" nust, by its very nature, vary directly as it loes within that group. This material in conunction with the data available from other ources can be used in the formation of policy by labour organizations, by employers who are nterested in the availability of certain types of abour and by manufacturers and distributors who require some knowledge of probable future narkets for many kinds of consumer goods.

Turning to the summary table presented on page 40 of this issue of the Review it will be observed that all data are given for the eight alendar years which have elapsed since the inception of the Unemployment Insurance Act nd also for the last available 28 calendar nonths. This arrangement allows comparison not only from month to month and year to year but also from any of the last four available nonths to the same month in the two previous ears. Thus a student of the material may determine, through analysis of the data, certain comparatively long term trends.

The first column of the table shows ordinary laimants signing the live unemployment egister on the last business day of the month n question. Whenever a claim for benefit is filed with a local office an unemployment egister is set up in the claimant's name and t is maintained as long as (a) he reports weekly (b) his claim is not disallowed, (c) he is not, disqualified, (d) his benefit year does not terminate, or (e) he is not re-employed. It can therefore be fairly said while the numbers shown in this column do not represent the number of persons receiving unemployment insurance benefit they do clearly indicate the number of persons who have worked in insurable employment and who have reported themselves as being unemployed and seeking employment. Here, therefore, is an excellent index of the fluctuations in general unemployment.

The second and third columns of the table should be read in conjunction since they show the number of persons who actually received benefit during the month and the number of persons who received their first benefit during the period. The difference between those receiving a first payment and the total of those receiving benefits during the month represent, of course, the carryover from the previous month or months of those persons who were unable to find employment. The next column gives the number of days for which benefit was paid. As will be seen below, for various reasons, this figure does not represent the total number of days of unemployment, but when its fluctuations from month to month are considered, it does indicate the growth or subsidence of unemployment.

Financial Operations

The next four columns deal with the financial operations of the Unemployment Insurance Commission under the Act. The amount of money paid out in benefits during the month under review is given as are the accretions to the fund from employer and employee contributions, governmental contributions and interest of investments. Under the Act money once paid into the fund cannot be used for any other purpose than the payment of benefits, all administrative costs being met by the Dominion Government from the consolidated revenue fund.

Contributions to the fund are made by both employer and employee in varying ratios and amounts depending on the employee's earnings, while the Dominion Government pays directly into the fund an amount equal to 20 per cent of the total received from both employers and employees. A large portion of the balance in the fund is invested in Dominion Government bonds, the interest received from these investments being added in turn to the fund itself. Accretions from this source are currently running at the rate of about $10.5 million.

The last two columns of the table give the number of unplaced applicants for employment together with the number of unfilled vacancies as reported by the local employment offices. The former cannot strictly be interpreted as a measure of unemployment since it is probable that many employed persons, desirous of improving or changing their positions, make application for employment. It is, however, an excellent guide to the use being made of the placement division of the National Employment Service and it should be noted that the number of unplaced applicants for employment consistently runs considerably higher than does the number of ordinary claimants for benefit on the live unemployment register. It should be observed further that not only is this number swollen by the probability of insured persons, other than claimants for benefit, registering but it is added to also by the registration of persons, either in or out of employment, who do not belong to the "insured population".

The unfilled vacancies are those reported by employers to the various local offices. While the vast majority of them will, of course, be positions falling within insurable industries and carry pay ranges which bring them within the scope of the Act, there is no limitation forbidding the listing of any vacancy and many employers not infrequently seek the assistance of the National Employment Service in filling vacancies outside the Act's authority.

Publications — (A) Monthly

The *Statistical Report on the Operation of the Unemployment Insurance Act* discusses monthly operations and is published approximately four weeks after the close of the month under review. It is based upon material supplied to the Bureau by the Unemployment Insurance Commission and consists of an explanatory text and six tables of statistical data. It is on this material that the summary table appearing in the Review and discussed above is based.

Table A shows the number of claims filed during the month under review, together with comparative data for the same month of the previous year, under the headings "Initial Claims", "Renewal Claims" and "Revised Claims". An initial claim is one filed by a claimant who has no benefit year (see below) in existence. A renewal claim is one made subsequent to an initial claim but made during the existence of the benefit year and after a period of employment and after the claimant has again become unemployed. A revised claim is either an initial or a renewal claim which for some reason or another has been reconsidered.

Table B shows the number of live claims outstanding on the last working day of the month broken down under the headings, type of claim, sex of claimant and the province in which the claim was made together with comparative data for the same month of the previous year. Live claims may be either "ordinary claims" (see column one of the table in the Review) or "other claims". These latter are comparatively few in number and are made by persons who engage in casual labour and thus draw benefit for very short periods at frequent intervals or by persons who have been put on "short time" at their place of employment and who may if they comply with the terms of the Act be compensated for the time lost.

A breakdown by sex, province, and number of days on the register of all persons signing the live unemployment register is given in table C The number of claims adjudicated during the month together with the decision reached is shown in table D while the following table gives the reasons for rejection (under eigh headings) of those claims in which it has been ruled that the claimant is not entitled to benefit.

The last table in this monthly bulletin set forth the number of persons commencing receipt of benefit during the month either a the result of an initial or a renewal claim, th total number of persons receiving benefit, th number of days' benefit paid, and the tota amount paid out in benefits. The figures fo each province are shown separately and th comparative data for the same month of th previous year is given.

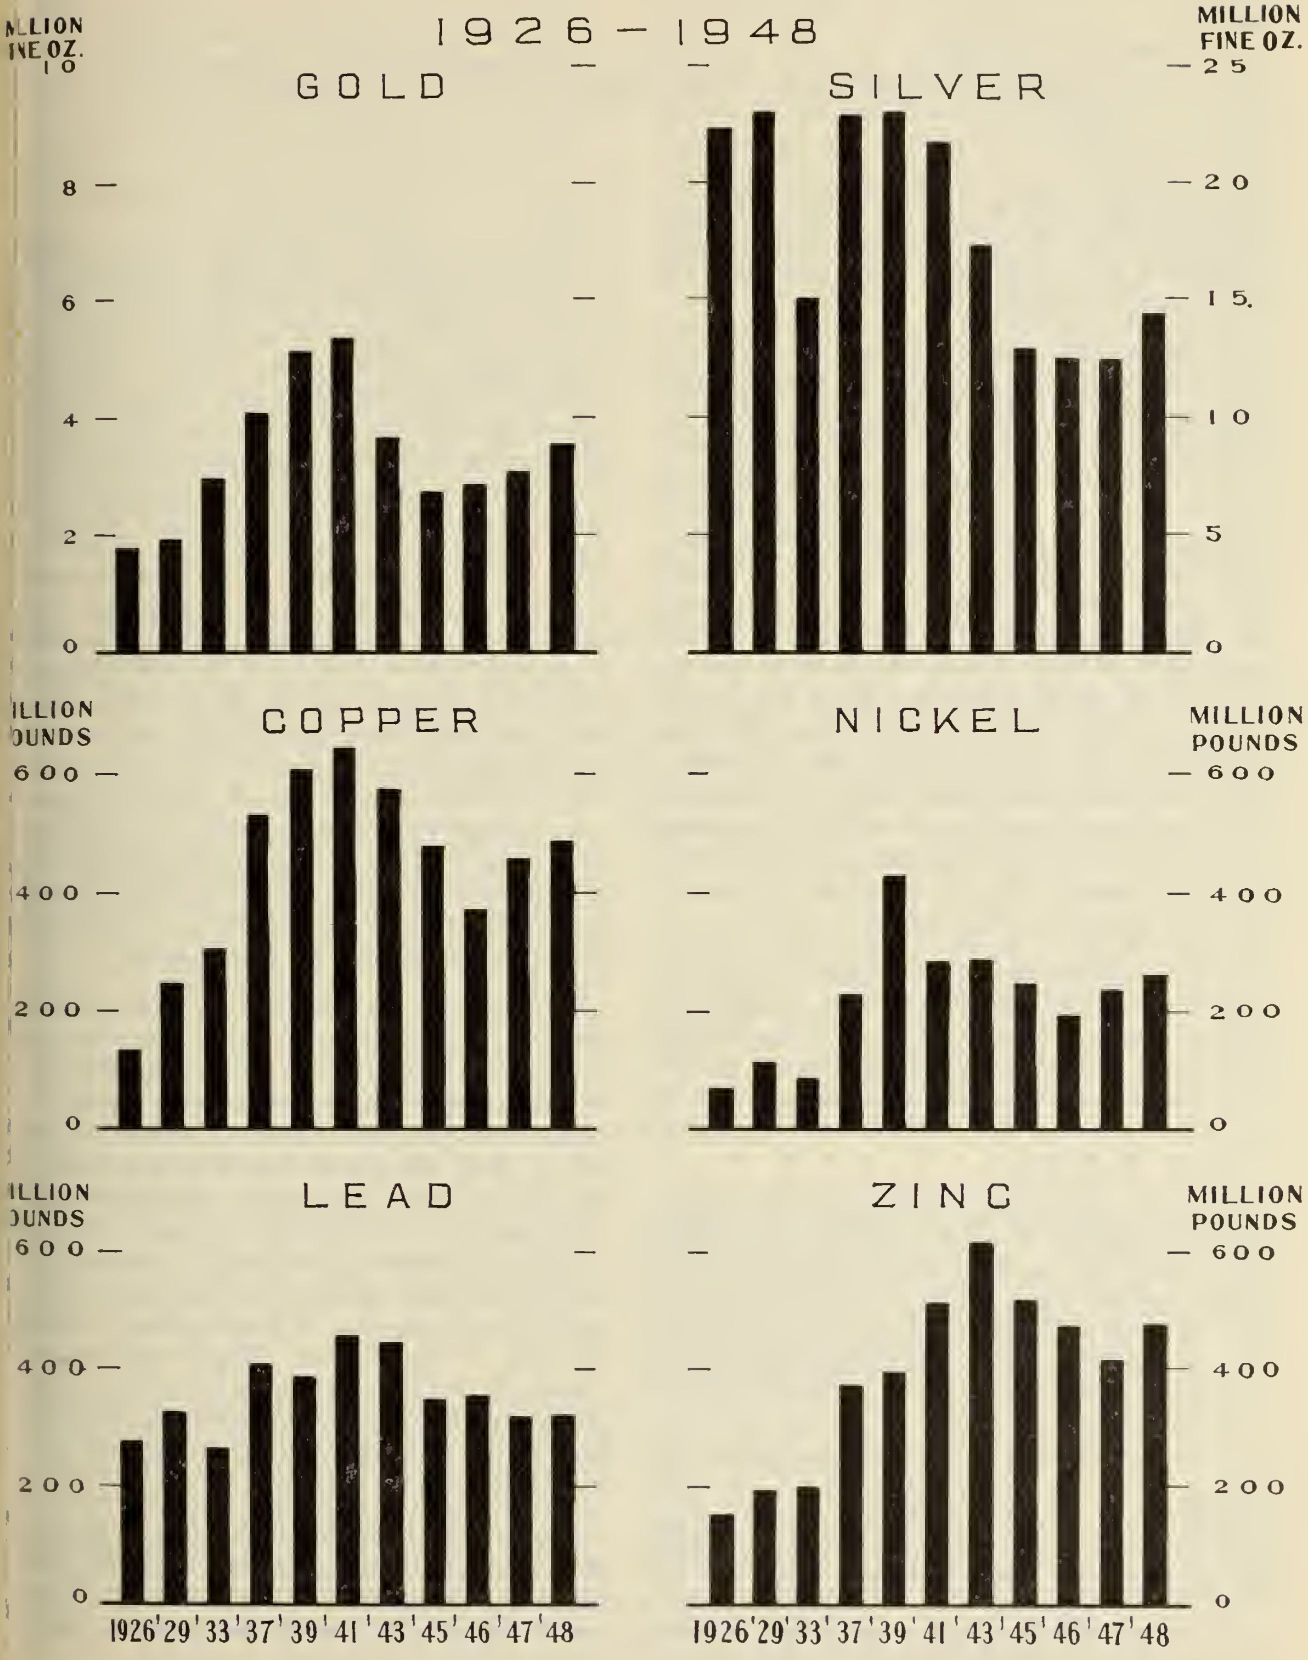
Publications—(B) Annual

The first annual report is a *Preliminar Report on Benefit Years Established an Terminated under the Unemployment Insurance Act — Calendar Year* published approximately four months after the close of the year A "benefit year" is a statement of the benefi

ANNUAL PRODUCTION

SIX KEY MINERALS

1926 – 1948



rights to which a claimant for unemployment insurance is entitled during the twelve calendar months immediately following the establishment of the benefit year provided that the claimant, upon becoming unemployed, makes application in the prescribed manner and it is proven that contributions have been made in respect to him while working in insurable employment for not less than 180 days during the immediately preceding two years. Further the claimant must be not less than 16 years of age and the majority of his contributions must have been made at a rate other than the lowest in the schedule.

The benefit year statement sets out the number of days benefit accruing to the claimant and the daily rate at which it will be payable. A benefit year is ended in either of two ways: (a) all rights under it may be exhausted prior to the end of the twelve month period or (b) it will terminate with the lapse of twelve calendar months after its establishment. When a benefit year terminates a new one may be immediately established provided that at least 60 of the required 180 days of contributions have been made since the commencement of the benefit year just ended. Thus it is not altogether uncommon to have a single claimant establish more than one benefit year within a calendar year. For statistical purposes it is preferable to discuss the annual insurance payment operations in terms of benefit years rather than in terms of persons paid benefits.

In the preliminary report tables 1 to 4 discuss the number of benefit years established, broken down provincially by the age groups and sex of claimants, the daily rate of benefit authorized, the occupations last followed by the claimants and the industries in which they were last employed.

Table 5 sets forth the number of benefit years terminated (that is, lapsed and exhausted) during the calendar year classified by the maximum duration of benefit authorized and the actual days benefit paid. It should be noted that in very many cases, although benefit has been authorized, none has been paid. This is because under the terms of the Act the first nine days following the establishment of the benefit year are "waiting days" and non-compensable. Since many claimants obtain employment during this period benefit years will be established but no benefit paid.

In table 6 will be found a breakdown by sex and province in which the claim was made, of benefit years terminated, those exhausted, an the number of days benefit paid in the exhaust ed benefit years.

Tables 7 to 10 discuss exhausted benefi years under various headings including (a the age groups and sex of the beneficiaries, (b the daily rate of benefit authorized by sex an province, (c) the industries of last employmen by sex and province, and (d) the occupation last followed, again by sex and province.

The last of the publications *Annual Repo on Current Benefit Years under the Unemplo ment Insurance Act — Calendar Year* appea about six months after the close of the yea and is largely an elaboration of the preliminar report. It does, however, carry some addition information in so far as the material in th preliminary is sub-divided into greater deta and, further, only in this publication is th subject of the "insured population" discusse

This term is susceptible to several defin tions. It could, for certain purposes, qui rightly include all those persons to whon insurance books and contribution cards a issued in any one year. Again, it could includ for other purposes, only those persons wh have complied with the minimum requir ments necessary to establish benefit rights. third definition would include only those pe sons employed in an insurable employmen at a given date plus those claiming benefit having been so employed at an earlier da and for whom books had been issued.

For purposes of this report the last definitio appears most practicable and the date use is April 1, at which time new books are issue for all persons in insurable employment who are on the live register. Tables "A", "B and "C" of the report therefore discuss n benefit years but the insured population as is defined above. The first of these tables di cusses the number of persons for whom boo were issued on April 1, of the year under revie under the headings of occupation, sex an province of employment. The second shows breakdown by industry, by sex and by five-ye age groups but not by province, while the la table of the group gives a breakdown by indu try, by sex and by province.

The remaining tables of this last publicatio are intended to amplify the material to found in the preliminary report and to ma any revisions that are found necessary to th data contained in the preliminary.

Current Economic Conditions

There are many signs that an upward trend, ssibly seasonal in character, is making self felt in current Canadian economic velopments, although the fluctuation of all nerally accepted indicators are not unirmally favourable. The index of industrial oduction, which in January and February opped from the plateau established in the tumn months to 178.6 and 179.4 respectively, bounded to 184.3, within 8/10 of a point of e September to December average of 185.1. e rise in the subindex of manufacturing om 190.5 in February to 195.8 in March was rgely responsible for the improvement. Retail ores sales during the month of March were lued at $578 million, six per cent above the tal for the same month last year and well ead of both the January and February, 1949, tals of $493 million and $470 million reectively.

Loadings of cars of revenue freight, however, re lower in the last available week (that ded May 14) than in the previous week and nsiderably below those of the corresponding ek of the previous year. The totals were ,104 cars for the week ending May 14, 74,354 r the week ending May 7, and 77,458 for the ek ending May 15, 1948. The cumulative tal for the current calendar year is 1,377,365 ile the totals for the same period of 1948 and 47 were 1,404,208 and 1,351,143. Thus it will seen that 1949 is running 1.9 per cent above 47 and 1.9 per cent below 1948. As a basis of mparison it might be mentioned that the ited States current cumulative total is nning approximately 8 per cent below that evious year's figure.

The cost-of-living index increased slightly om March 1 to April 1, standing at 159.3 as mpared with 159.2, when a reduction in the od index number from 199.1 to 198.5 was not fficient to offset slight gains in all other mponents. The weekly wholesale price index industrial materials continued to decline d for the week ended April 22 stood at 152.9, proximately 7 per cent below the wartime peak of 163.2 reached in the week of August 27, 1948. There have been small but steady declines in this weekly index ever since the beginning of the present year. An easier tone was also evidenced in the prices for Canadian industrial and utility stocks during the month of April although the price index of shares in 25 representative gold mining companies increased 4.0 points from March 31 to April 28, standing on the latter date at 71.6.

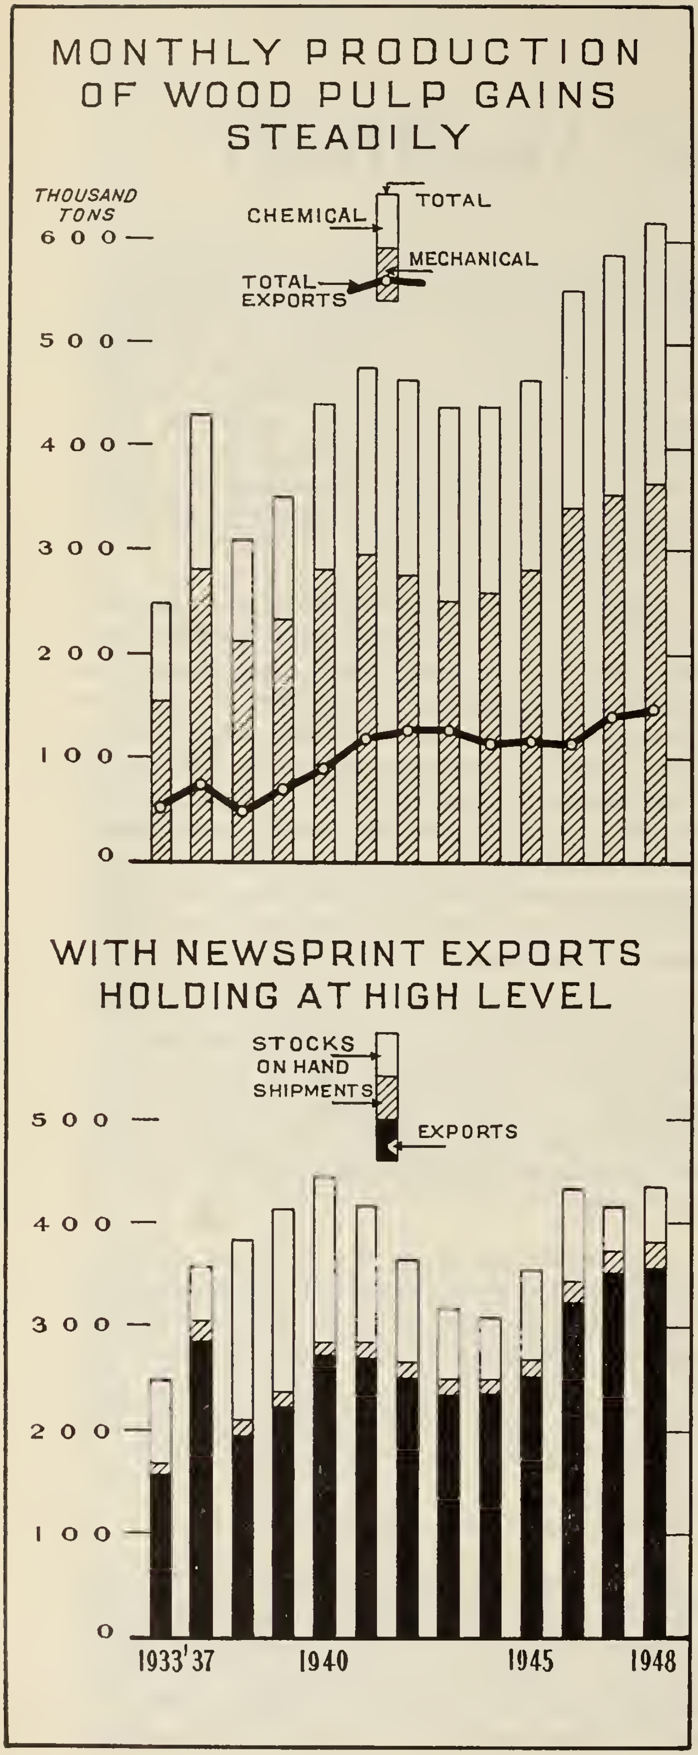
17,826 new dwelling units were completed during the first quarter of the current year, according to an estimate prepared by the Bureau of Statistics in co-operation with the Central Mortgage and Housing Corporation. This total is 54 per cent above the 11,569 dwelling units completed in the first quarter of 1948. Construction was started on a further 8,396 units during the first three months of this year compared with 6,678 starts for the same period of the previous year, an increase of about 25 per cent.

While undoubtedly the very heavy carryover of 56,456 uncompleted units from the previous year was a contributing factor to the large number of completions, nevertheless, these with the increased number of "starts" must indicate considerably increased activity in this vital field.

It is estimated from the types of dwelling constructed that 28 per cent of those completed during the quarter were for rental purposes and the remainder for owner-occupancy. 2,217 of the rental units completed during this period are under the management of the Central Mortgage and Housing Corporation.

Some Recent U.S. Developments

An almost startling change of peculiar interest to the Canadian mining industry has recently taken place in the United States metal market. Scrap steel which reached a 1949 high of $43.00 per ton sold at the middle of May for $22.75, a decline of 47.1 per cent. Copper, lead



and zinc, all of which are exported from Canada to the United States have reacted similarly. Copper dropped from a 1949 high of 23.5 cents a pound to 18 cents, a decline of 23.4 per cent. Despite this price decline deliveries of refined copper to U.S. consumers during the month of April amounted to 76,000 tons, 33 per cent below March deliveries and 34 per cent below the deliveries of April, 1948.

Zinc dropped from 17.5 cents per pound to 12 cents, a decline of 31.4 per cent and lead from 21.5 cents per pound to 14 cents, a decline of 34.9 per cent. Deliveries of these two metals were also considerably below those of earlier month and of the same month last year. Tin, probably because of the unsettled political and economic conditions of the far east tin belt, has maintained a steady price level throughout 1949 at $1.03 per pound.

Wholesale prices, as measured by the Bureau of Labor Statistics weekly index, declined in the week ended May 3 for the ninth consecutive week. The index then standing at 155.2 (1926 = 100), 4 per cent below a year ago. The value of department store sales in the week ended April 30 were 4 per cent below those of the corresponding week of the previous year while sale for the four month period, January to April, were 3 per cent below those for the same period of 1948.

Employed persons in the United States numbered, according to a Census Bureau estimate, 57.8 million in April, 1949, compared with 57.6 million in March, 1949, and 58.3 million in April, 1948. The Federal Security Agency, in a forecast based on employer opinion, estimates that a seasonal peak of employment will occur in July at which time approximately 60 million persons will be in gainful employment, a figure 2.6 per cent below the all time record of 61.6 million employed established last summer.

The U. S. Department of Commerce reports a a significant increase in the rate of Americans' personal savings. During the year 1948 these were estimated at 7.6 per cent of the Personal Disposable Income while for the last quarter of that year they were 9.2 per cent and for the first quarter of the current year they reached 10.7 per cent.

Industrial Employment

The seasonal decline which has appeared in seven out of the last ten years brought industrial employment in Canada on March 1 to a slightly lower level than that held on February 1, according to reports received from 19,938 leading firms in the eight major industrial divisions. The index of employment (base 1926 = 100) stood at 189.2 on March 1 as compared with 190.5 on February 1 and 188.9 on March 1 of last year.

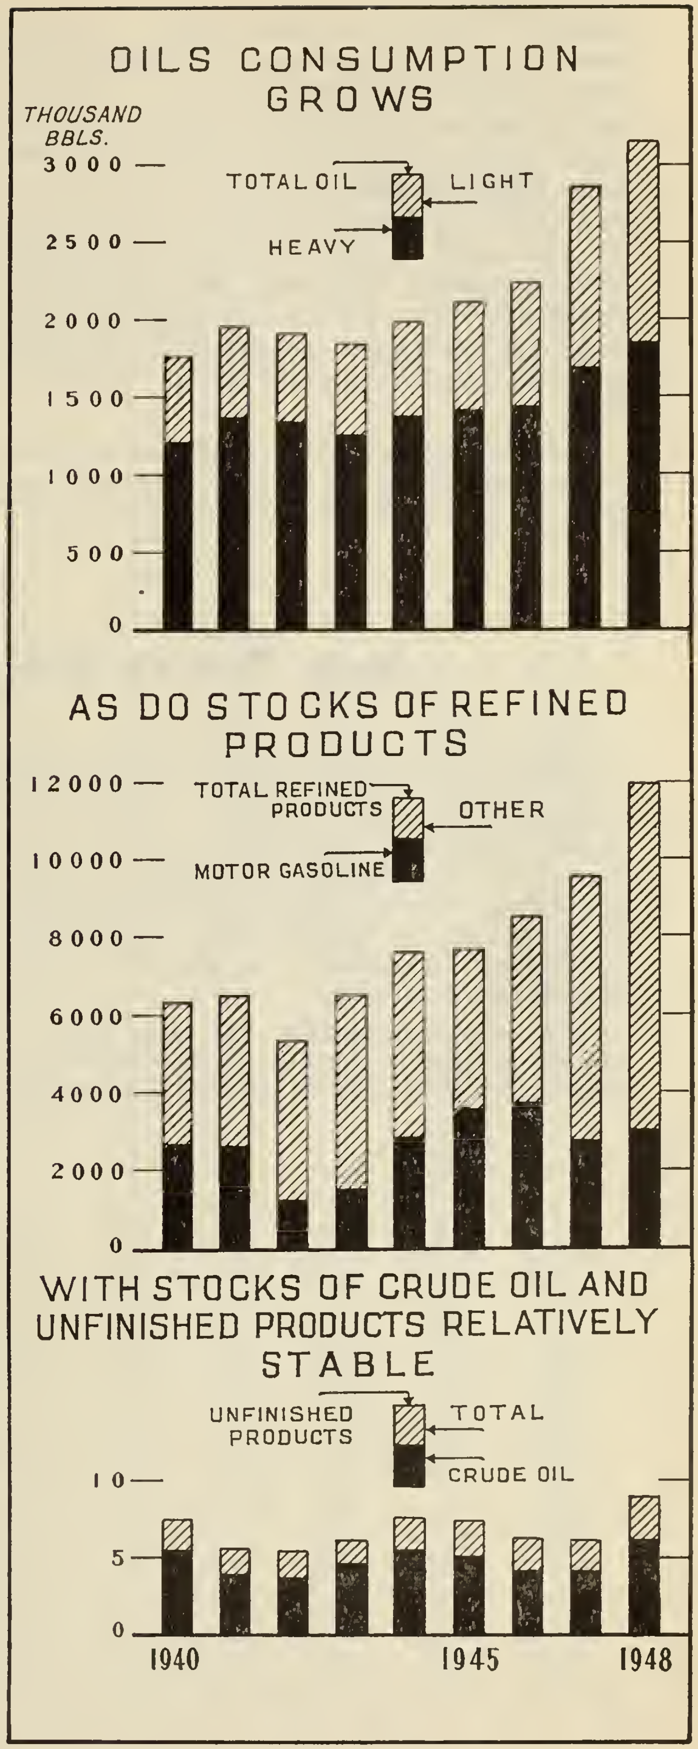
Declines of 6.2 per cent in logging and 2.9 per cent in construction were reported at the beginning of March compared with a month earlier, the losses being largely seasonal in character. Largely the result of the industrial dispute in asbestos mining, employment in the mining group as a whole fell by 1.8 per cent.

Accompanying the minor recession in the total volume of employment there was, March to February, a decrease of 0.2 per cent in the index of total weekly payrolls. As compared with March of the previous year, however, this index rose 9.5 per cent. The average earnings per employee reached a new peak figure of $43.17 as compared with $42.92 at February 1 and $39.50 for March, 1948.

Caused in the main by the seasonal recession in the volume of employment referred to above the *Monthly Estimate of Labour Income in Canada* issued by the Bureau for the month of February last shows a drop of $3 million from $608 million in January to $605 million. The February figure was, however, $56 million or 11 per cent greater than the similar figure for the same month of 1948. Increases in labour income, from January to February, occurred in manufacturing, transportation, communication and storage, finance and fishing. These increases, however, were overbalanced by decreases in all other industries.

World Price Movements

World price movements during the second half of 1948 continued, in general, to advance but at greatly diminished rate and there are many indications that peak levels were reached or passed during this period. Buyers' markets developed in a number of primary commodities and in others an easing of demand was noticeable. The Canadian wholesale price index



reached a peak in December when it touched 159.6, the highest mark reached since August, 1920, and small recessions have been noted in each of the four months of the current calendar year. The United States general wholesale price index reached a peak of 169.5 for August and by December had receded to 162.3. As in Canada the movement of this index during the first four months of this year has been slowly downward. The United Kingdom figure in December was 0.8 per cent below that of June although 8.5 per cent above that of December, 1947.

In France wholesale price levels continued to advance but during the period June-December, 1948, the rate of increase was 16.6 per cent as compared with 38.9 per cent for the first six months of the year and 34.6 per cent for the second half of the year 1947. The Italian wholesale price index which during the first half of the current year had declined 6.9 per cent reversed this trend in the latter half of the year and advanced 10.8 per cent.

The cost-of-living indexes, in general, reflected the movement of wholesale prices and declines ranging from 0.2 per cent to 1.3 per cent were recorded in the United States, United Kingdom, Norway, Czechoslovakia, and other countries. Slight increases in this index were noted in, among other countries, Canada, France, Spain, and the Netherlands.

Base Period Weights To Be Shown

In this issue of the *Canadian Statistical Review* a start has been made towards showing the weights allotted to components in the base period where composite index numbers are quoted. In the present issue weights are quoted only for the cost-of-living index (Table 17, page 43) but it is hoped that in the near future this practice will be extended to all tables susceptible to such treatment.

With this information the behaviour of general indexes in relation to movements of component series can be more readily understood. It will also be easier to understand why a composite index may differ materially from a simple average of its components.

Readers who check the calculations of the composite cost-of-living index may find that their answers occasionally differ by a decimal or two from the composite index published. This will be due to the fact that office calculations are based upon figures carried to several decimals beyond the component group indexes published.

---

(1) Not applicable to Column 5 "Average hourly earnings".

(2) Annual data as of June 1, monthly data as of March 1, May 31, August 16, November 8, 1947 and February 21, June 5, September 4 and November 20, 1948.

(3) See note on page 20.

(4) Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12.

(5) Includes retroactive payments to railway employees.

(6) Conversions are included with annual data only.

(7) See pages 94 and 95.

*Under revision.

---

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

* Averages of five weeks.

(1) Monthly averages or calendar months.

(2) Annual data as of middle of July. Monthly data for dates varying from 8th to 17th of month. February 1947 as of 22nd.

(3) Average quarterly statistics are given in the monthly section, except the recent data for exports which are monthly estimates.

(4) Interim index of retail prices, June 17, 1947 = 100.

(5) Series revised, June 30, 1947 = 100.

(1)As of June 1. (2)Exclusive of stillbirths.

(3)Not applicable to figures on population.

(4)Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

---

(1) As of June 1. (2) Exclusive of stillbirths.

(3) Not applicable to figures on population.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

---

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

[1] Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

[2] Excluding producers' interchange.

[3] Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

[4] Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

(1) The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

---

(1) Hollow blocks including fireproofing and load-bearing tile. (2) Planks and boards.

(3) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

---

(1)Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2)Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

(3)Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

(4)Includes customs exports of Canadian oatmeal and rolled oats.

---

(1) Available for January, April and August only.

(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4) Prior to 1941 prices were quoted on a live weight basis.

(5) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

(6) Subject to revision.

---

(1) Does not include re-exports.

(2) This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.

(3) Other iron and steel has been revised to include iron ore.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of month in Statistical Summary of the Bank of Canada. *See footnote of page 106.

---

[1] The annual statistics embrace all steam railways, while monthly data refer to railways with annual operatin revenues of $500,000 or over.

[2] Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent equipment and joint facilities.

[3] For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid September, were not included in that month's operating expenses. Payrolls as now reported monthly a according to the new wage scales.

---

(1) Prior to 1941 statistics are for shipping year ended March 31. (2) Annual data are averages of nine months

(3) Excludes Canada-United Kingdom Route.

(4) Annual data include tugs. The data of registered tonnage were revised for 1948 to cover clearings only, thus ensuring comparability with the statistics for other periods.

Census of Industry

The Dominion Bureau of Statistics was arged, under the Statistics Act of 1918 (now placed by the Statistics Act, 1948) with the king, at appropriate intervals, of a census industry and production. Since 1917 an nual survey of the production of manufac- ring industries in Canada has been made. bsequently, co-operative arrangements were ade with departments of Government con- rned with the collection of statistics on the imary industries of mining, forestry and hing whereby the Bureau would collect atistics of production and related informa- on and make such data available to the partments.

The Census of Industry as presently con- tuted is therefore concerned with the collec- on, compilation and distribution of statistics lating to the operation in Canada of all imary industries, except agriculture, and of anufacturing. This survey is made annually d is supplemented by the collection of onthly or quarterly statistics of production d in certain instances stocks, of key com- odities, which time has shown to be good rometers of business, and in addition fur- shes valuable and up-to-date data which can used as a guide by those industries pro- cing such commodities.

The Census of Industry is divided into five ctions. These are (a) the Animal Products ction (b) the Forestry Section (c) the Fish- ies Section (d) the Mining, Metallurgical d Chemical Section and (e) the General anufactures Section.

The Forestry Section, the Fisheries Section d the Mining, Metallurgical and Chemical ction deal with the collection of data covering e output of the primary product or products ncerned and follow these primary products rough the secondary manufacturing pro- sses necessary to convert them into con- mable goods. Thus the Forestry Section thers data and reports on logging operations; on the output of sawn lumber; on the operation of planing mills; on the production of pulp and on the ultimate output of paper of various kinds.

The Animal Products Section differs slightly from the others in so far as it is concerned only with the processing of foods and other products, primary production statistics being gathered by that section of the Bureau of Statistics compiling agricultural data.

The General Manufactures Section has a threefold function. First, it reports on the manufacturing operations of those firms engaged in manufacturing articles which are not specifically covered in the first four listed divisions, and secondly, it collates all manufacturing figures reported by the other divisions and thus presents a general picture of Canada's manufacturing activities. Thirdly, it gathers data on those manufacturing firms not specifically covered by the first three groups.

Detailed studies of the operations and functions of each of these five main subdivisions of the Census of Industry will be published in subsequent issues of this Review since it is obviously impossible to do justice to their multifarious activities in an article of a general nature discussing the Census of Industry as a whole.

Construction and Capital Expenditure

In addition, other sections of the Census of Industry Division deal with construction and capital expenditure during the year. The former, which has now been in operation about fifteen years, maintains a comprehensive survey of all classes of building construction, including types of materials used and their costs, value and type of finished structures, capital investment, wages and salaries paid, number of employees in the industry at stated periods and the number of hours worked. The data are supplied to the Bureau on questionnaires sent to all individuals and firms engaged in the construction industry as contractors, builders, etc. All ordinary building operations of those contractors engaged in the construction of dwellings, office buildings, factories, steam and electric railways, hydro-electric plant construction, highway construction of all types, culverts and bridges, docks, piers; in fact, all types of structure or immovable plant are covered. From these data the Construction Section is able to present in a single comprehensive report a complete survey of all construction work undertaken in the year.

The section dealing with capital expenditures in industry obtains, by means of questionnaires, a record of the amounts spent on new construction, machinery, and equipment and on repairs to structures and equipment each year. The data are obtained only from those firms engaged in primary or secondary production where the gross value of the year's output exceeds $50,000 and from the more important operators in the service industries. About 15,000 manufacturing firms are contacted and a further 5,000 operators in the other industrial groups.

Census Coverage

The census, which covers, as far as possible, every individual operator, partnership, incorporated company and co-operative engaged in the production of primary or secondary products, is conducted by mail for complete annual reports and for monthly reports on production only where this material is required. The procedure is that the Bureau mails to every firm a schedule seeking by means of questions the detailed information it requires and asks the receiver to mail the completed return back within 21 days. All firms are supplied the questionnaire in duplicate and are asked to retain one completed copy on their own files. Thus if further correspondance concerning any item is necessary the reporting firm can refer to its own copy of the schedule in reply to the Bureau's request for clarification.

Since this is an industrial census rather than a record of gross production much more than a mere counting of output is sought. The annual schedule in the case of manufacturers asks for detailed information of such points among others, as (a) nature of business; (b) exact location of plant by city, county and province; (c) salaries, wages and commissions paid; (d) number of salaried employees and wage earners on payroll at the last working day of each month of the calendar year under review; (e) power equipment subdivided by type of equipment and horse power rating, both that ordinarily in use and that held in reserve or otherwise idle; (f) fuels and electricity used during the year with an indication of both the quantities used and cost at factory; (g) materials and supplies used both by quantities and by total cost; and (h) details of products made giving quantities and selling prices at plant.

The schedules sent to producers of primary products are, of course, adapted to the needs of the particular product but they follow the same general pattern as that outlined above with those questions concerning output and materials used replaced by others designed to elicit the specific information desired. The monthly schedules sent firms in those industries where monthly output totals are desired are much simpler and ask only for production totals by volume of units produced and in some cases for the factory selling price of them.

The data assembled by these means are compiled in the appropriate section of the Bureau's Census of Industry Division and monthly totals of production of all firms combined are published where these are available. When only a small number of producers are in the field the Bureau usually indicates by name the reporting firms. Every precaution is, of course, taken to keep individual reports confidential and without a firm's specific authorization none of its reports are shown to any individual, any other governmental agency or to any provincial or municipal authority.

Yearly the Bureau publishes comprehensive reports on the various industries covered such as: "paint and varnish manufacturing", "the coal mining industry", "the gold mining industry", "various sections of the textile industry", "farm implement manufacturing", "the pulp and paper industry", etc. These reports based on the annual questionnaires referred to above show the gross number of persons employed in the industry, the total output by items, the selling price at plant, the quantities of materials used and their cost. In the case of manufacturing, these data are further summarized and analyzed in two publications entitled (a) The Geographical Distribution of the Manufacturing Industries of Canada and (b) the Annual Summary of the Manufacturing Industries of Canada.

Users of the Reports

The material thus compiled and published is of great value to a vast number of persons and organizations. Through it is indicated to the people of Canada the economic health of the nation, since the Census of Industry, when considered as an entity, clearly shows whether or not industrial activity has increased or decreased from one year to another. Further it shows in what specific industries advances or declines have been made and supplies the data from which the extent of these movements can be measured.

Federal, provincial and municipal governmental departments rely upon the statistics of production and consumption in planning tax rates and estimating yields. During and after the war period the federal government's price fixing, material allocation, and control measures were, to a great extent, based upon the knowledge of production and consumption gained through the operations of the industrial census.

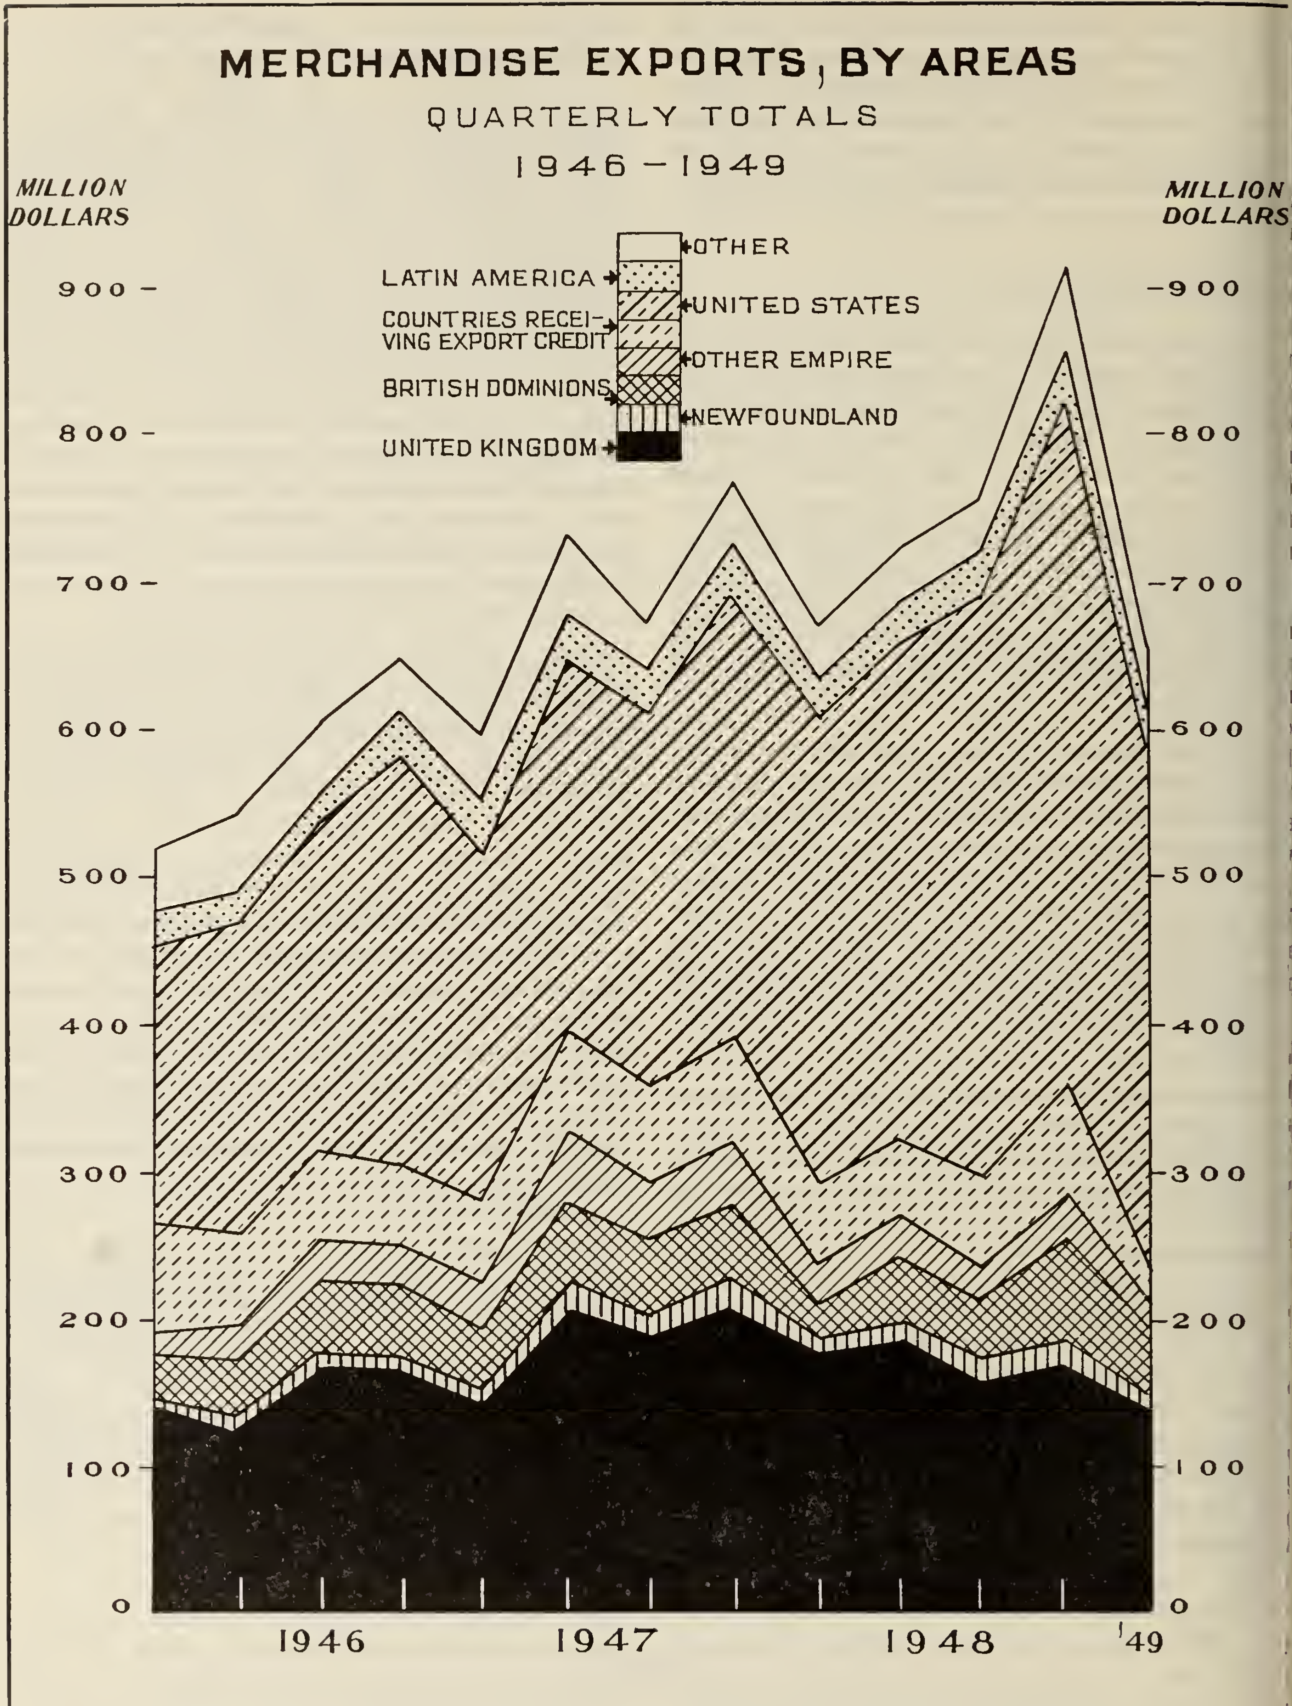
Banks, insurance companies and other financial agencies study the reports on various industries, noting their growth and output from year to year before placing their own or their clients' capital in firms operating within the industry.

Trade and labour unions and their officials find in the material supplied by the Census of Industry data of vital importance to themselves. Statistics on the number of persons engaged in any industry, on the number of days worked per year, on the gross amount paid out by the industry in wages are all essential to union officials in determining future policies, in entering into wage contracts, in establishing apprenticeship regulations, etc.

The greatest importance of the Census of Industry, however, is to the firms and individuals contributing towards its collection by their individual reports. While under no circumstances can a firm learn anything of the operations of an individual competitor it can evaluate its own position and importance in the industry through a correlation of its own statistics to those of the whole industry. A study of the data assists a firm to determine whether or not its labour force is efficient, whether its operating costs and materials costs are above or below the norm, whether or not in an expanding market it is obtaining its fair share of the increased business, thus using the figures of the whole industry as a yardstick by which to measure its own efficiency.

Market analysis is another useful purpose to which industrial statistics can be put. Before opening a manufacturing or selling branch a firm can by study of the Bureau's figures determine the availability of labour, the amount of local competition which will be encountered in the proposed new territory. Again, producers must base future plans upon the absorptive capacity of the market and the number of articles apparently available to fill the consumer needs. Indeed, it was for this reason that in more than one branch of manufacturing the firms engaged therein have come to the Bureau of Statistics and have asked that production figures be gathered and published monthly in order that production schedules might more accurately be adjusted to meet changing conditions.

Trade associations not infrequently find that data from the Census of Industry aid them in the preparation of briefs to be presented to government departments, Royal Commissions, and similar organizations, in respect to tariff adjustments, transportation rates, price fixations and allied matters. In short, the Census of Industry is essential to the well being and advancement of those individuals and firms engaged in industrial operations.



MERCHANDISE EXPORTS, BY AREAS

QUARTERLY TOTALS

1946 – 1949

Current Economic Conditions

The index of production for the month of April, last, reached 187.2, which was at a peace ime high. The corresponding figure for March of this year was 185.5 and for the same month a year ago 184.1. The previous peace time high was reached in December, 1948, when the index tood at 185.8. Increased production of durable goods was primarily responsible for the rise with the subindex for transportation equipment moving from 252.5 in March to 266.7 or April while that for motor vehicles moved from 189.3 to 212.9. In both these cases new highs since 1945 were reached.

The cost-of-living index showed a slight ncrease between April 1 and May 2 moving from 159.3 to 159.5. This was caused by the rise n the food index of a full point from 198.5 to 199.5 at which point it was 5.9 points below the October, 1948, mark of 205.4. Upward movement in the food index was in part, at least, offset by the decline in the fuel index which, owing to lower prices in Ontario and Quebec, dropped from 131.0 to 129.1. Fluctuations in the indexes of the other groups making up the cost-of-living index were within very narrow ranges.

The May monthly average of the weekly wholesale price index of industrial materials dropped rather sharply from that of April, last, the figures being 149.9 and 153.9 respectively. This drop in a wholesale price index may well reflect the indication of increased production referred to above. Wholesale prices for Canadian farm products moved slightly higher from 147.3 in April to 147.6 in May as compared with 150.4 in May, 1948.

Common stock prices as reflected in the weekly investors' index of common stock prices (1935-1939=100) showed continued weakness with the index dropping from 105.4 for April 28 to 103.1 for May 26. The monthly average of this index has now declined steadily since November, 1948, when it stood at 117.8. The high since this series was inaugurated was reached in June, 1948, when a mark of 120.3 was reached. Mining stock prices were also subtantially lower in May with the composite index for 30 representative stocks dropping from 84.9 on April 28 to 80.4 for May 26. The drop was particularly sharp in the base metal stocks which, reflecting recent severe cuts in metal prices, moved between April 28 and May 26 from 110.2 to 103.3. The monthly average of this weekly index number has now declined from a high of 128.6 reached in January, 1949, to 107.5 for May. The stock price index for 25 representative gold stocks moved within much narrower limits with the May average of the weekly figure standing at 69.4 down 2.9 points from the April mark of 72.3 but above the figures for the first three months of this year.

Civilian Labour Force

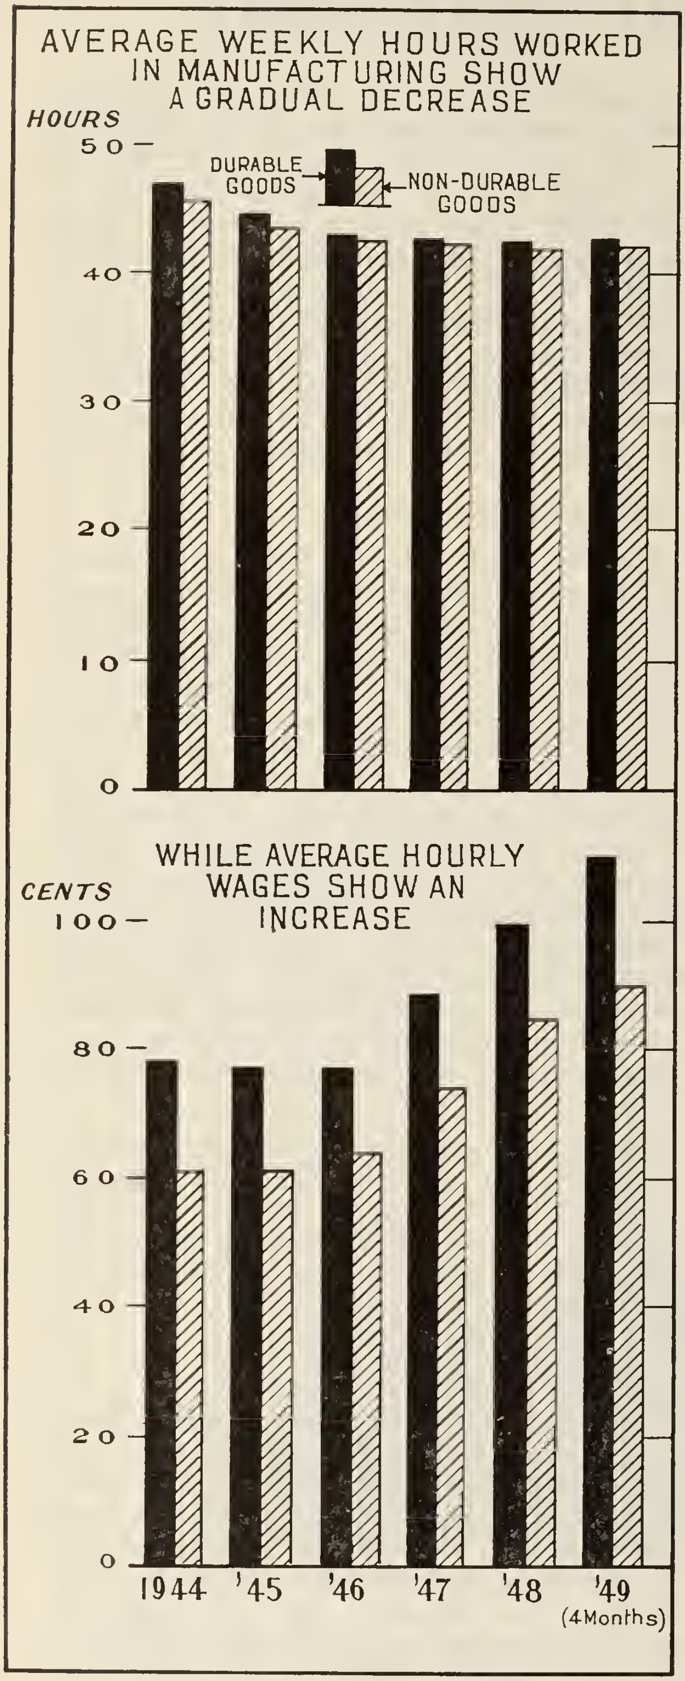
Canada's civilian labour force as of March 5, 1949, was estimated to total 4,899 thousand persons. This compares with 4,825 thousand on February 21, 1948, and 4,706 thousand on March 1, 1947. The civilian labour force is defined as the total number of persons over 14 years of age working or available for work for salaries, wages or profits. Since it is possible for persons attending schools, keeping house, or voluntarily not in the labour force to move in or out of it at will the figure constantly fluctuates, reaching the year's low point towards the end of winter and its high point at the end of summer. Unemployed numbered 199 thousand, seasonal influences being mainly responsible. This figure is approximately 4.1 per cent of the total labour force.

Labour income for the month of March, 1949, was $605 million, unchanged from the February estimate. In September, 1948, it was $664 million. This, however, included retroactive payments to railway systems employees amounting to $31 million.

Commercial Failures

Commercial failures during January, 1949, totalled 97. Failures during February and March, last, were 93 and 80 respectively, thus giving a quarterly total of 270, the largest quarterly total since the first quarter of 1941 when failures numbered 294. Subsequent to the year 1941 failures in the first quarter of each year declined steadily until in 1946 only 54 were reported. Since that date the trend

HOURS WORKED AND HOURLY WAGES IN MANUFACTURING



has been in the opposite direction with failure during the first quarter of 1947 totalling 12 while in the similar quarter of 1948 they numbered 203.

Failures were greater than in the first quarte of the previous year in all of the four mai economic groups, the trade group leadin with 93 failures. This was an increase of 26 o 44.9 per cent over the 1948 total of 67. Th manufacturing group ranked next with 5 failures compared to 39 in the first quarter o 1948. Failures in the service group increase from 42 in the initial three months of 194 to 51 during the same period of the curren year. The miscellaneous group includin construction and transport firms reported 4 failures as against 30 in the earlier year whil failures unclassified as to industrial groupin were 21 as compared with 25.

Although an analysis of the liabilities of th defaulting firms reveals that they were greate than for the same periods for any year sinc 1936 it must be remembered that there ha been a considerable rise in prices and value since that year. Thus, though the total o $4,196 thousand for the first quarter of 194 compares in absolute figures with $4,484 thousand in the same period of 1936 on the basis o 1936 prices and values, the 1949 figures woul be reduced very considerably.

April Foreign Trade

Canada's imports for consumption from al countries (excluding gold) were valued at $242. million compared with $235.9 million for th previous month and $226.7 million for the sam month of the previous year. The cumulativ total of the value of imports for the first fou months of this year was $908.4 million compared with $812.1 million in 1948, an increas from one year to the next of 11.9 per cent. I this connection it should be noted that durin the earlier year there were severe restriction against imports from the United States an other dollar countries which have been largel abolished or alleviated since the end of 194

Domestic exports to all countries were value at $237.8 million compared with $216.8 millio for March and $212.3 million for April of 194 The cumulative total of the value of export of domestic products for the first four month of the current year was $896.6 million whil he similar total for the first four months of he previous year was $884.4 million. The ncrease of the 1949 figure over that of 1948 vas $12.2 million or 1.4 per cent.

From the above it will be seen that Canada's urchases of foreign goods exceeded exports of omestic products by $4.9 million in April, 949. However, during the month Canada e-exported foreign goods the value of which ppears under "imports for consumption" but ot under "domestic exports" to the amount of 2.5 million. There was, therefore, a net dverse trade balance during the month of 2.4 million. The comparative figures for the irst four months of the current year were a ross adverse balance of $11.8 million and a et, after making allowance for the re-export f foreign goods to the value of $8.8 million, of 3.0 million. For April, 1948, there was a net dverse balance of $11.6 million and for the irst four months of that year the balance was avourable to the amount of $83.4 million.

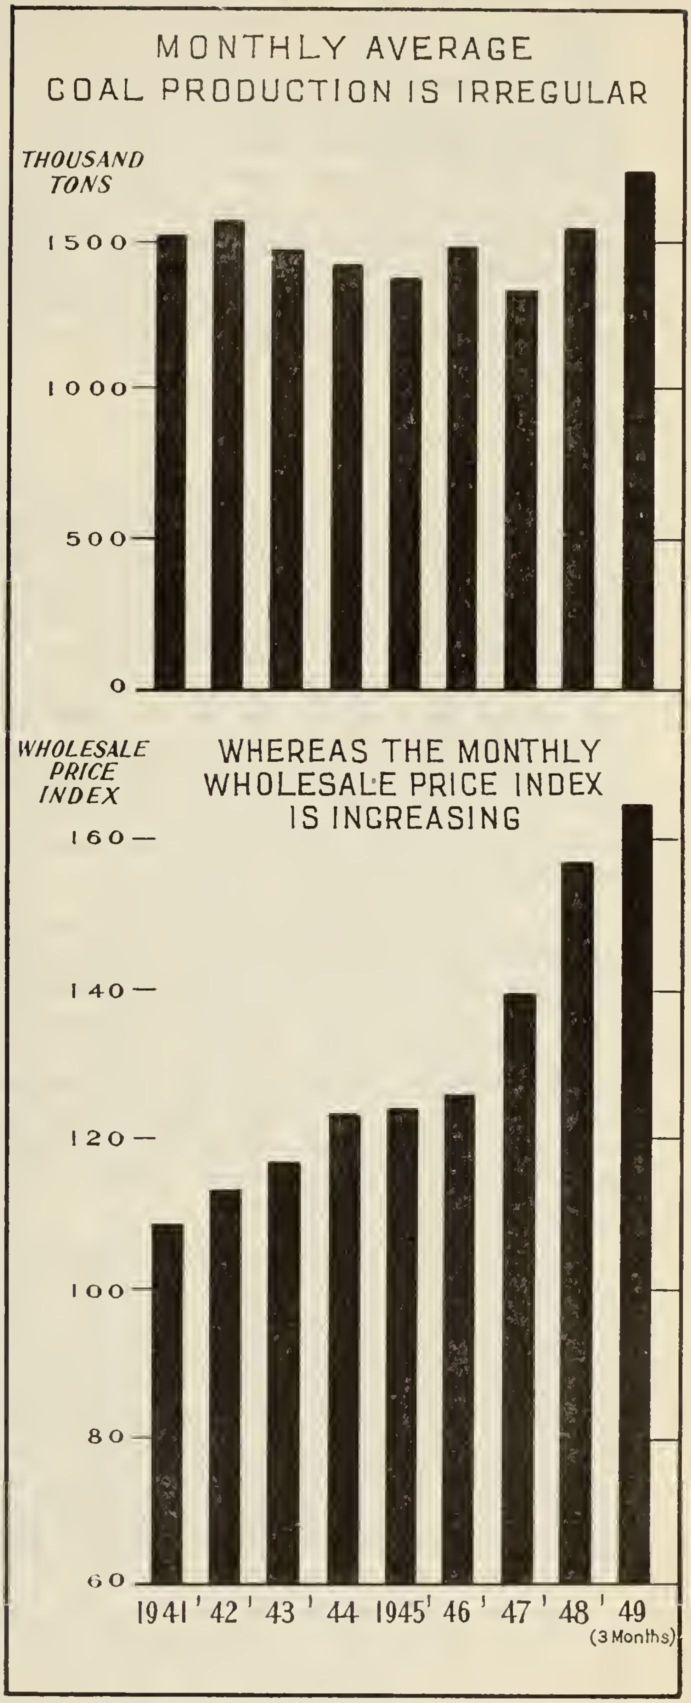
Imports from the United Kingdom during April, last, were valued at $30.1 million as compared with $28.3 million for the previous month and $24.6 million for April, 1948. The cumulative total for the first four months of this year was $106.8 million and for the previous year it was $85.7 million. Thus, it will be seen that from one year to the next imports from the United Kingdom increased by approximately 24.6 per cent.

Exports to the United Kingdom were valued at $63.0 million as compared with $39.5 million in March and $44.4 million in April, 1948. The cumulative totals were $202.5 million in 1949 and $220.1 million in 1948. There was therefore a reduction in Canadian shipments to U.K. of about 8.0 per cent of the 1948 total.

As a result of the increase in British shipments to Canada and the reduction of our exports, the Canadian cumulative trade balance for the first four months of the year has been reduced from $134.8 million in 1948 to $96.6 million in 1949.

Approximately 60 per cent of Canada's total foreign trade in April, last, was in the form of exchange of goods with the United States. We imported goods to the value of $177.3 million, or 73 per cent of the total imports, in April compared with $169.0 million in March and $159.5 million in April of last year. Exports

COAL PRODUCTION AND PRICES



to the United States amounted to $110.7 million or 46 per cent of the total exports in April, $122.4 million in March and $109.2 million in April, 1948. The cumulative adverse balance of trade for the first four months has increased from $155.9 million in 1948 to $197.9 million in the current year. As has already been pointed out, it is quite clear that the removal or lessening of restrictions on imports from dollar countries plus increased Canadian travel in the United States are undoubtedly largely responsible for this rising adverse trade balance.

Crop Conditions

The Bureau's estimate, as at June 21, of crop conditions in the west indicates improvement in many districts due to recent rains but there are still sections where rain is desperately needed to stave off very serious deterioration of the grain. Manitoba seems to be the most favoured since most areas report that conditions have improved to such an extent that in most cases the prospects for the crops are excellent. The recent rains have also kept the grasshopper menace in the infested areas to a minimum and have allowed spraying operations to be effectively carried out.

Rain in Eastern Saskatchewan has improved the outlook but rain is urgently required in the southwestern section to relieve the drought. The prospects in the central part of the province range from good to poor, and in the north conditions remain fair. The grasshopper plight is greater in Saskatchewan than in Manitoba, with greatest danger in the central portion of the province, and danger of it spreading to other sections.

Alberta reports extremely varied conditions. The southern portion of the province has improved due to rainfall of ½ to 1 inch. In most other sections the conditions are not so favourable. The central section of the province reports the grain to be at a standstill for need of rain, especially in the west central area. Grasshopper danger is not as great as in Saskatchewan and the danger has been further reduced by spraying and other controls, but there is still need for care in the most infested areas.

In all the provinces the amount of rain that has fallen since the first of April is still below the normal for this period. Alberta is suffering the most as the total to date is only 2.68 inches whereas the normal is 4.52 inches. Saskatchewan follows with 3.26 inches, the normal being 4.32 inches, while Manitoba with 4.43 inches, with a normal of 4.85 inches, is the least affected province.

Production of Metals

Gold production during the month of April amounted to 325,200 fine ounces, off seven per cent from the high figure for the year reached in March when production was 342,700 fine ounces. The April, 1949, figure was, however, about 14 per cent higher than in the same month last year when 286,100 fine ounces were produced. Production for the first four months of the year amounted to 1,284,500 fine ounces compared with 1,108,800 in the same period of the previous year.

April production by provinces and territories, with the figures for the same month last year in brackets, was as follows: Ontario 187,400 (172,400) fine ounces; Quebec 78,300 (64,100); British Columbia 24,600 (26,500); Northwest Territories 17,600 (7,000); Manitoba and Saskatchewan 17,400 (15,800); Yukon nil (91) and Nova Scotia nil (1).

Production of primary copper continued at the high rate established during the earlier months of the year with a total production of 22,400 tons in April. This is the largest monthly tonnage total recorded since January, 1944 During the first four months of this year production has totalled 86,800 tons as compared with 81,600 tons in the similar period of 1948.

Nickel output in April declined to 10,600 tons from 21,600 in the preceding month and 13,200 in the corresponding month last year. Cumulative output for the four months ended Apri was, however, slightly higher than in the same period last year standing at 45,300 tons as compared with 44,100 tons.

---

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

(1) As of June 1. (2) Exclusive of stillbirths. (3) Not applicable to figures on population. (4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

[1] Monthly data as of end of month while annual section is based on averages of month-end statistics.

[2] Prior to 1944 data included deferred as well as current vacancies.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.
